

A New Approach to Study Supernovae Dust with SPICA

AKARI/IRC

Masaomi Tanaka

(IPMU, University of Tokyo)

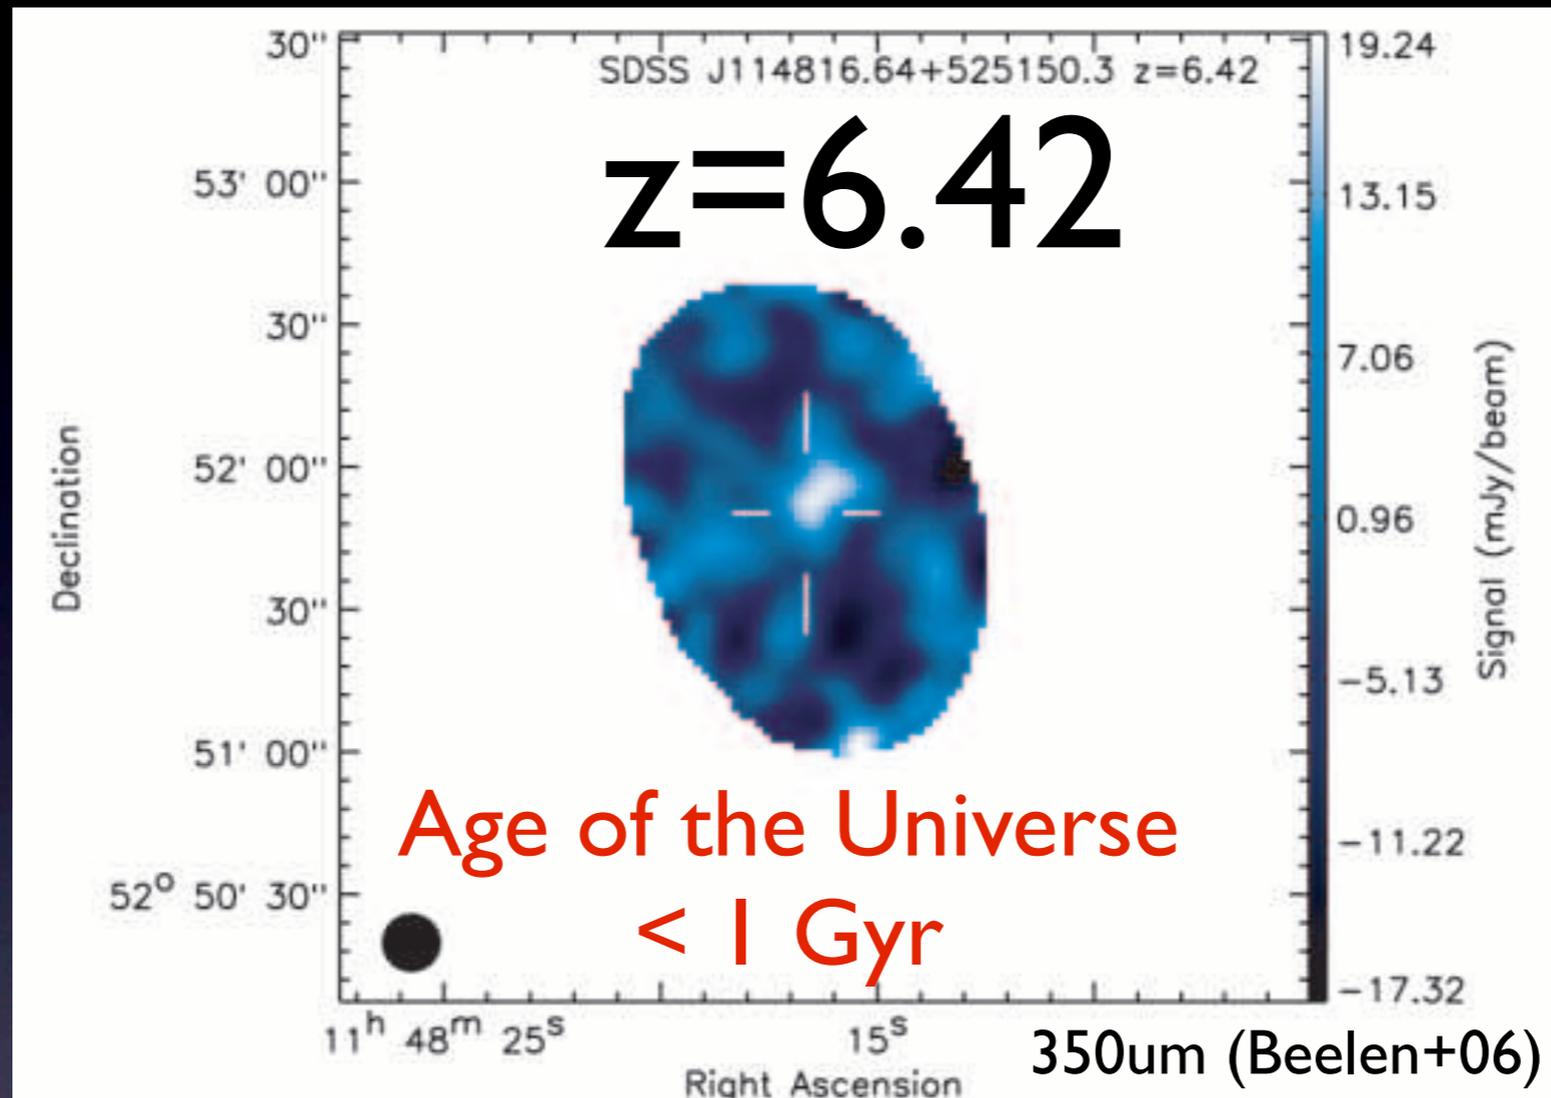

Takaya Nozawa, Itsuki Sakon, Ko Arimatsu, Takashi Onaka,

Ryo Ohsawa, Keiichi Maeda (U. Tokyo), Takehiko Wada,

Hideo Matsuhara (ISAS/JAXA), Hidehiro Kaneda (Nagoya U.)

**Do Supernovae Form
Dust
in the Early Universe?**

Origin and Evolution of Cosmic Dust

$M_{\text{dust}} \sim 0.1 - 1 M_{\text{sun}}/\text{SN}$
(Dwek+07)

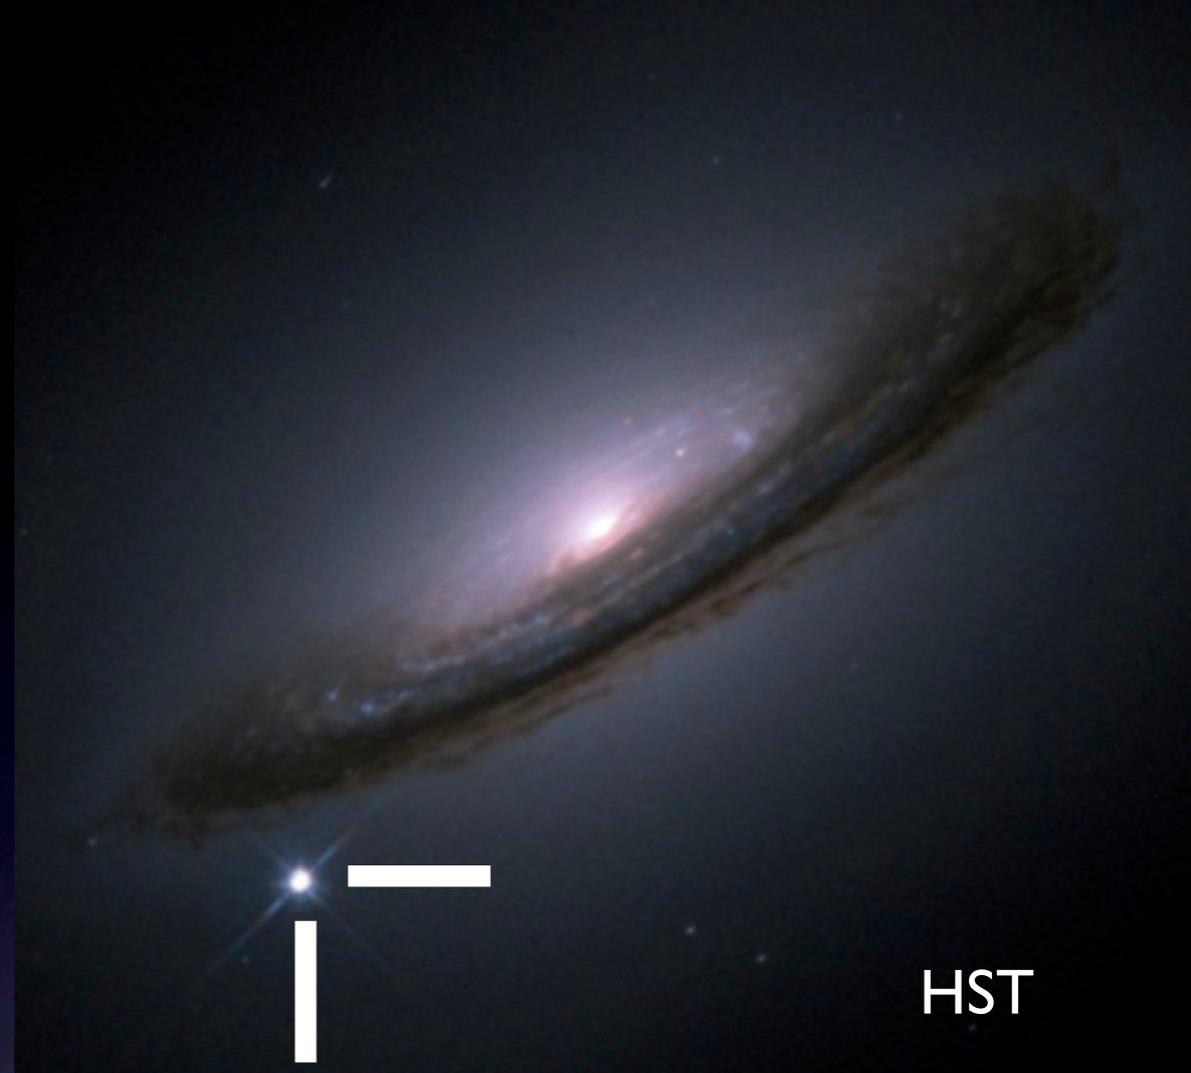

Theory $\sim 0.1 M_{\text{sun}}/\text{SN}$
(Todini+01, Nozawa+03)

Flat extinction curve
in quasars @ $z \sim 6$
(e.g., Maiolino+04)

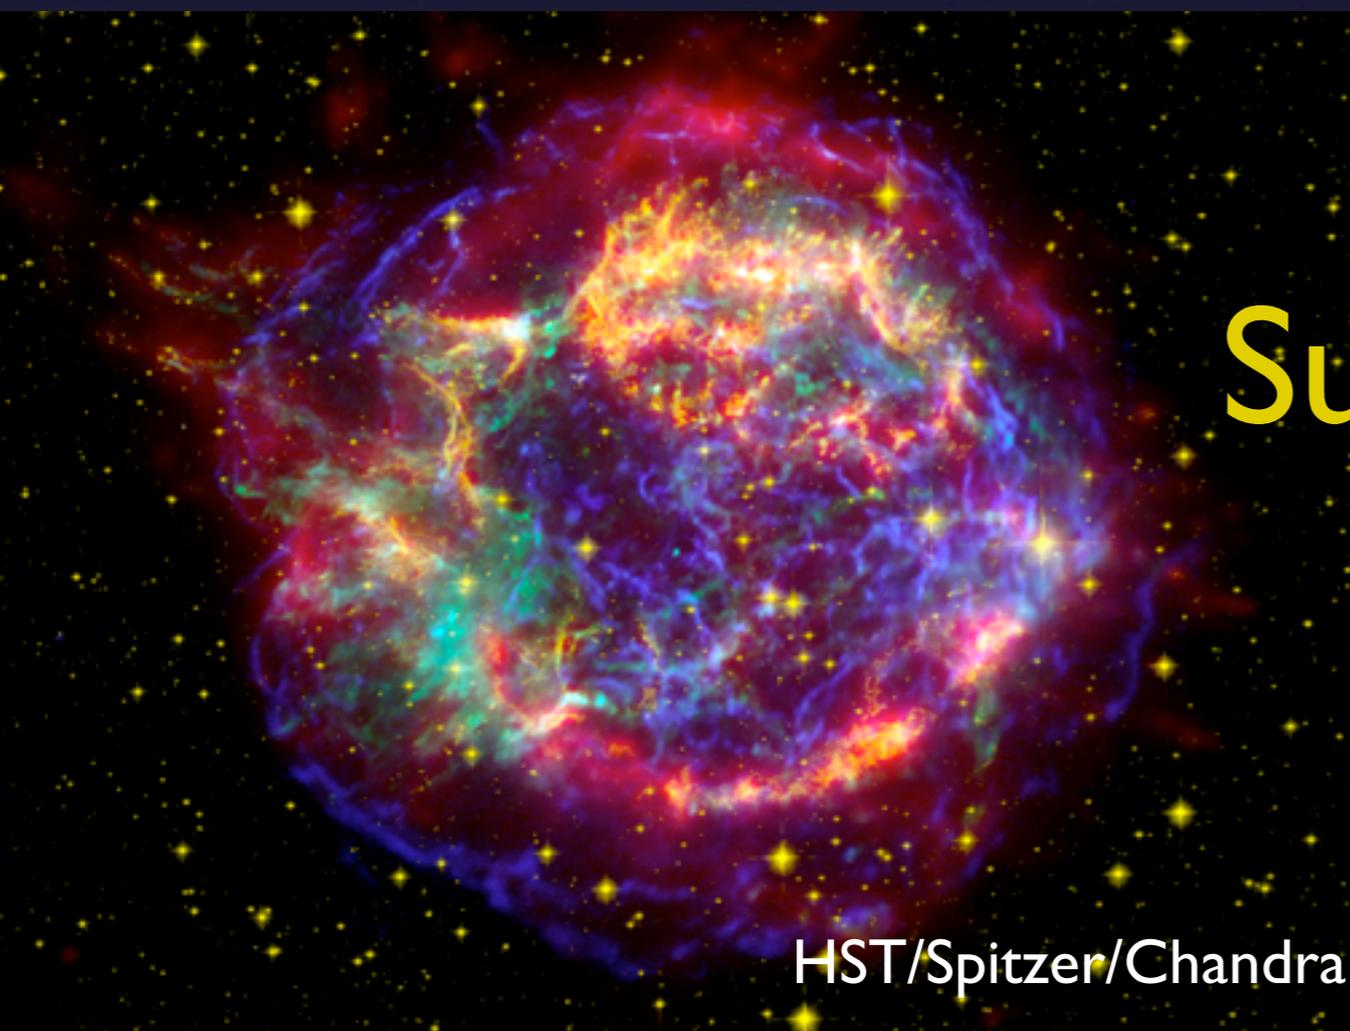

Young Supernovae

(age \sim 1-2 yr)

10^{-4} Msun

HST

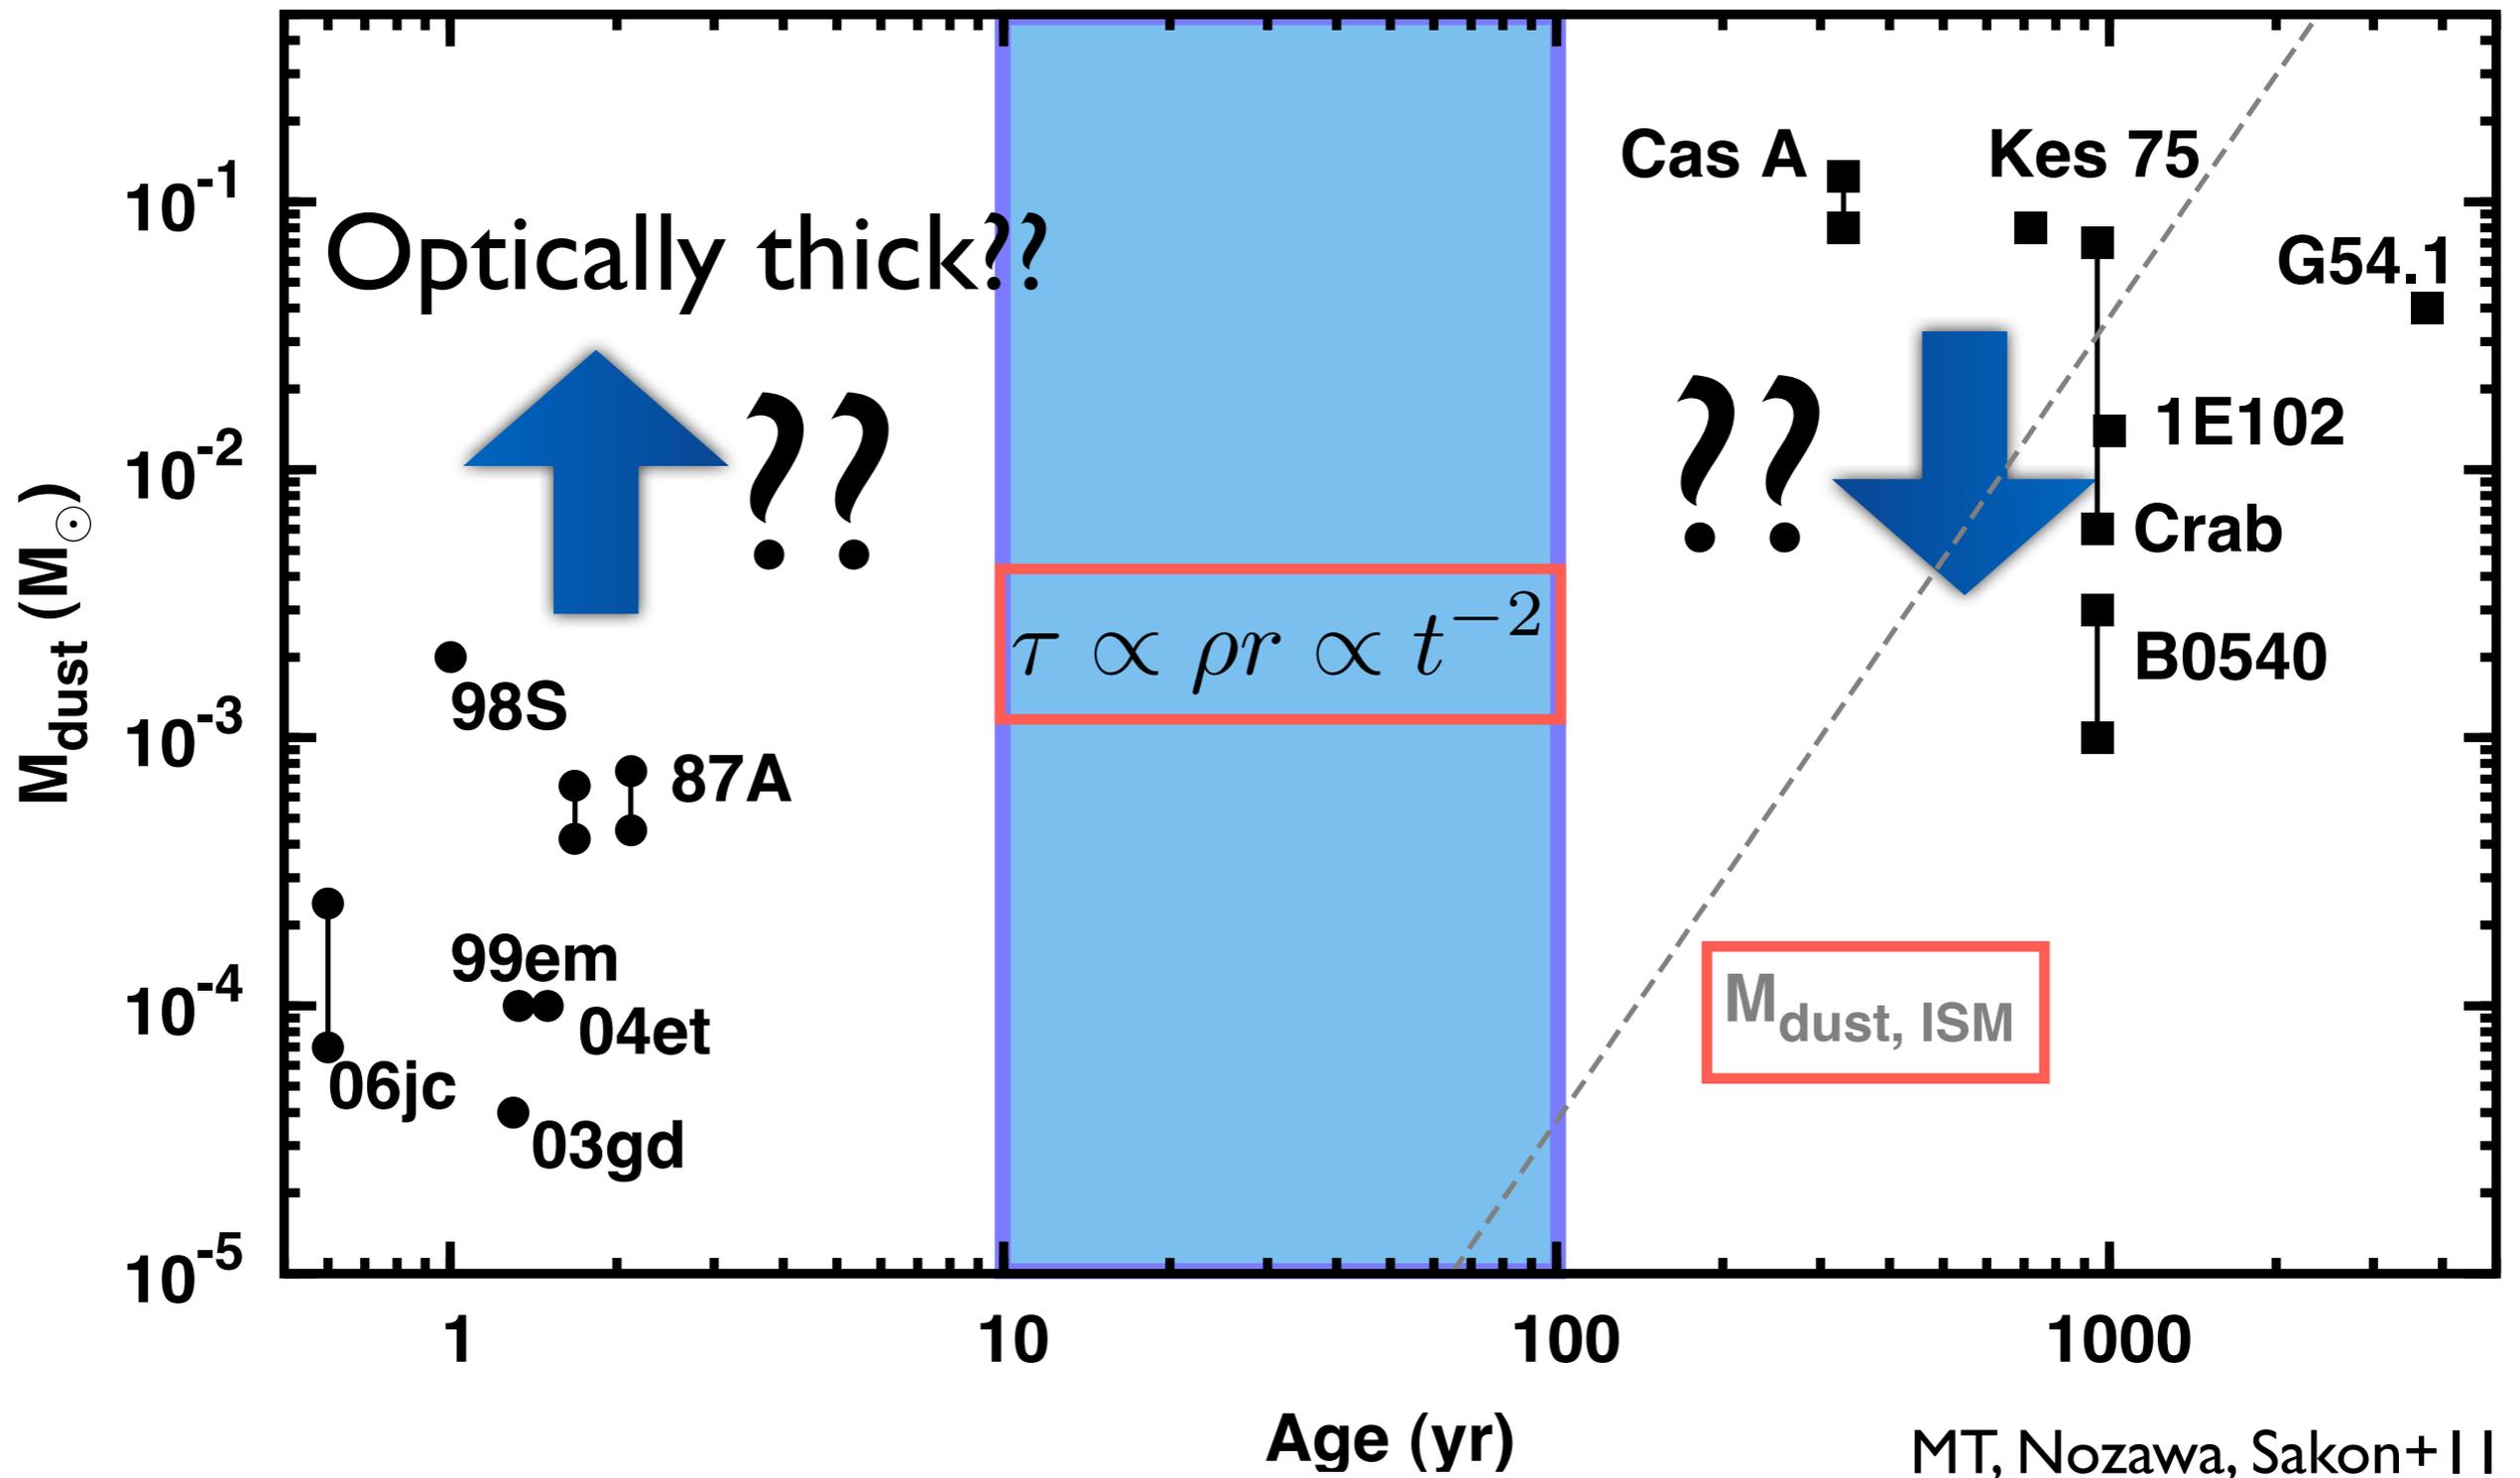

HST/Spitzer/Chandra

Supernova Remnants

(age $>$ 300 yr)

10^{-1} Msun

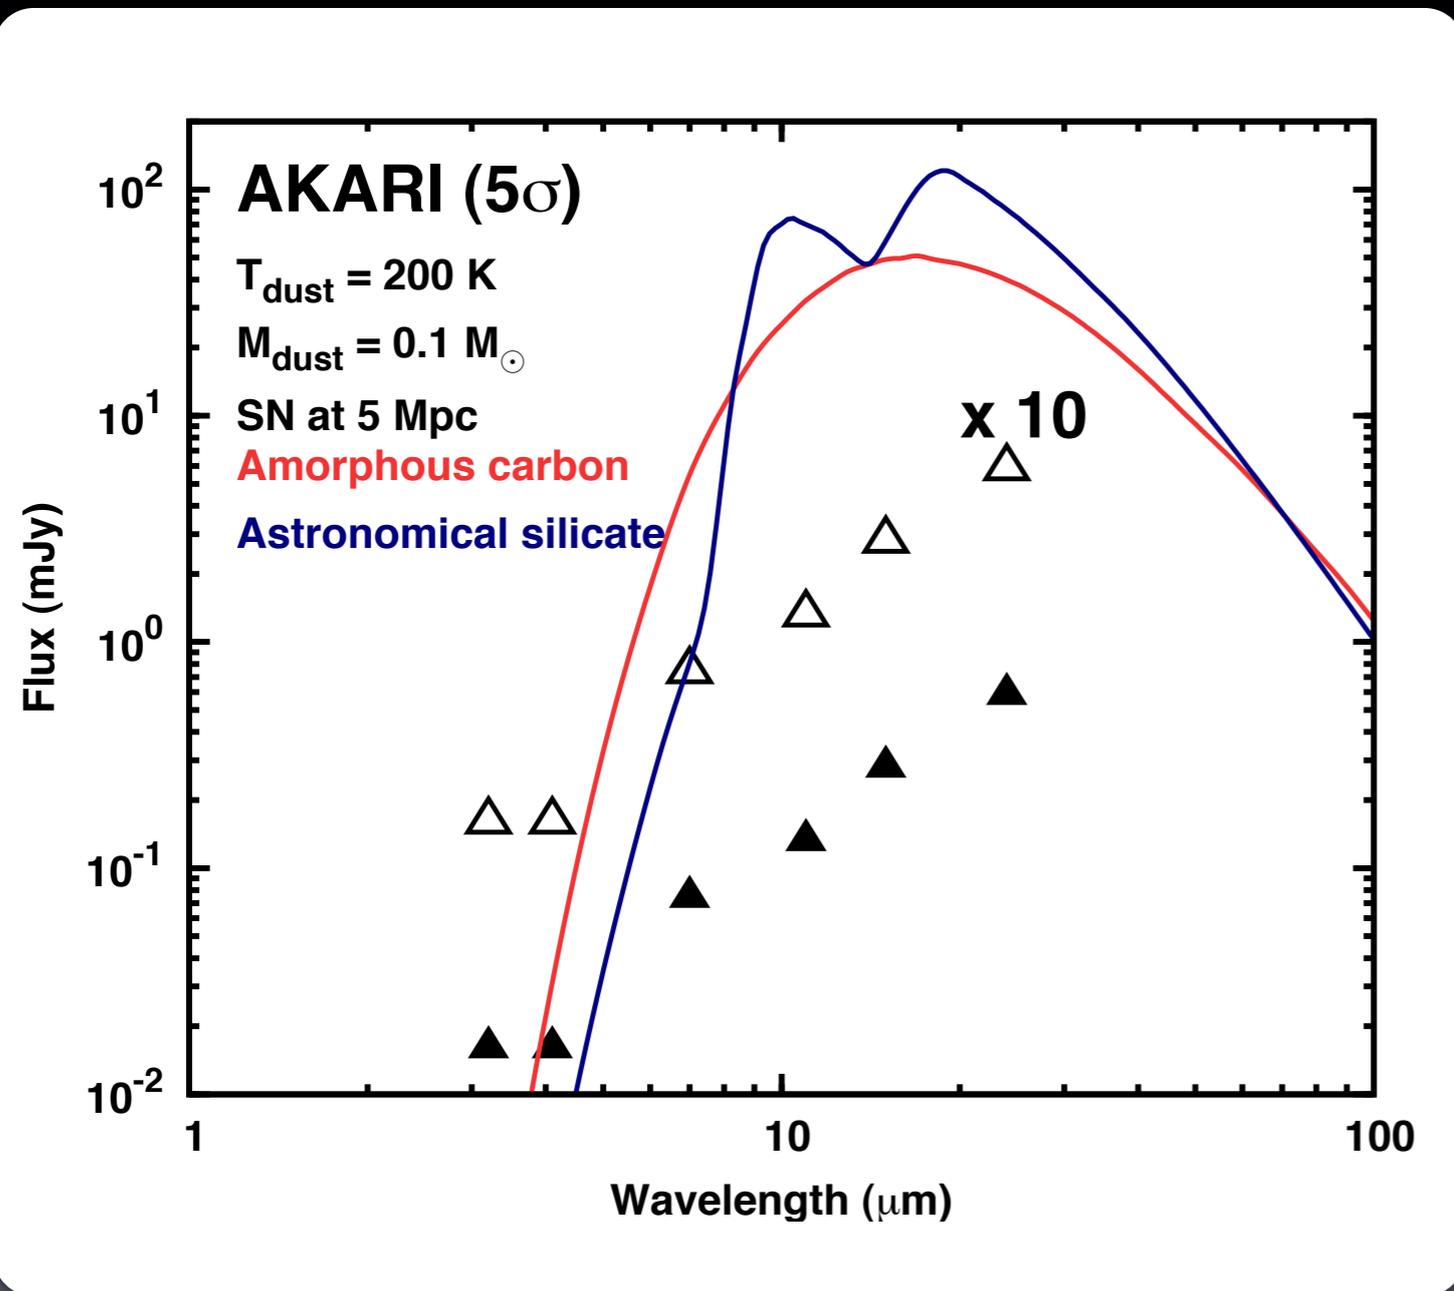

Young supernovae: Ercolano+07, Wooden+93, Pozzo+04, Elmhamdi+03, Meikle+07, Kotak+09, Mattila+08, Sakon+09

Supernova remnants: Rho+08, Sibthorpe+10, Barlow+10, Nozawa+10, Morton+07, Green+04, Temim+06, Rho+09, Sandstrom+09, Williams+08, Temim+10

Search for Dust
in
“Middle-Aged”
Supernovae!!

How Crazy We Are

AKARI/IRC 3, 7, 15um

SN 1909A

SN 1951H

M101
(6.7 Mpc)

SN 1980K

SN 1968D

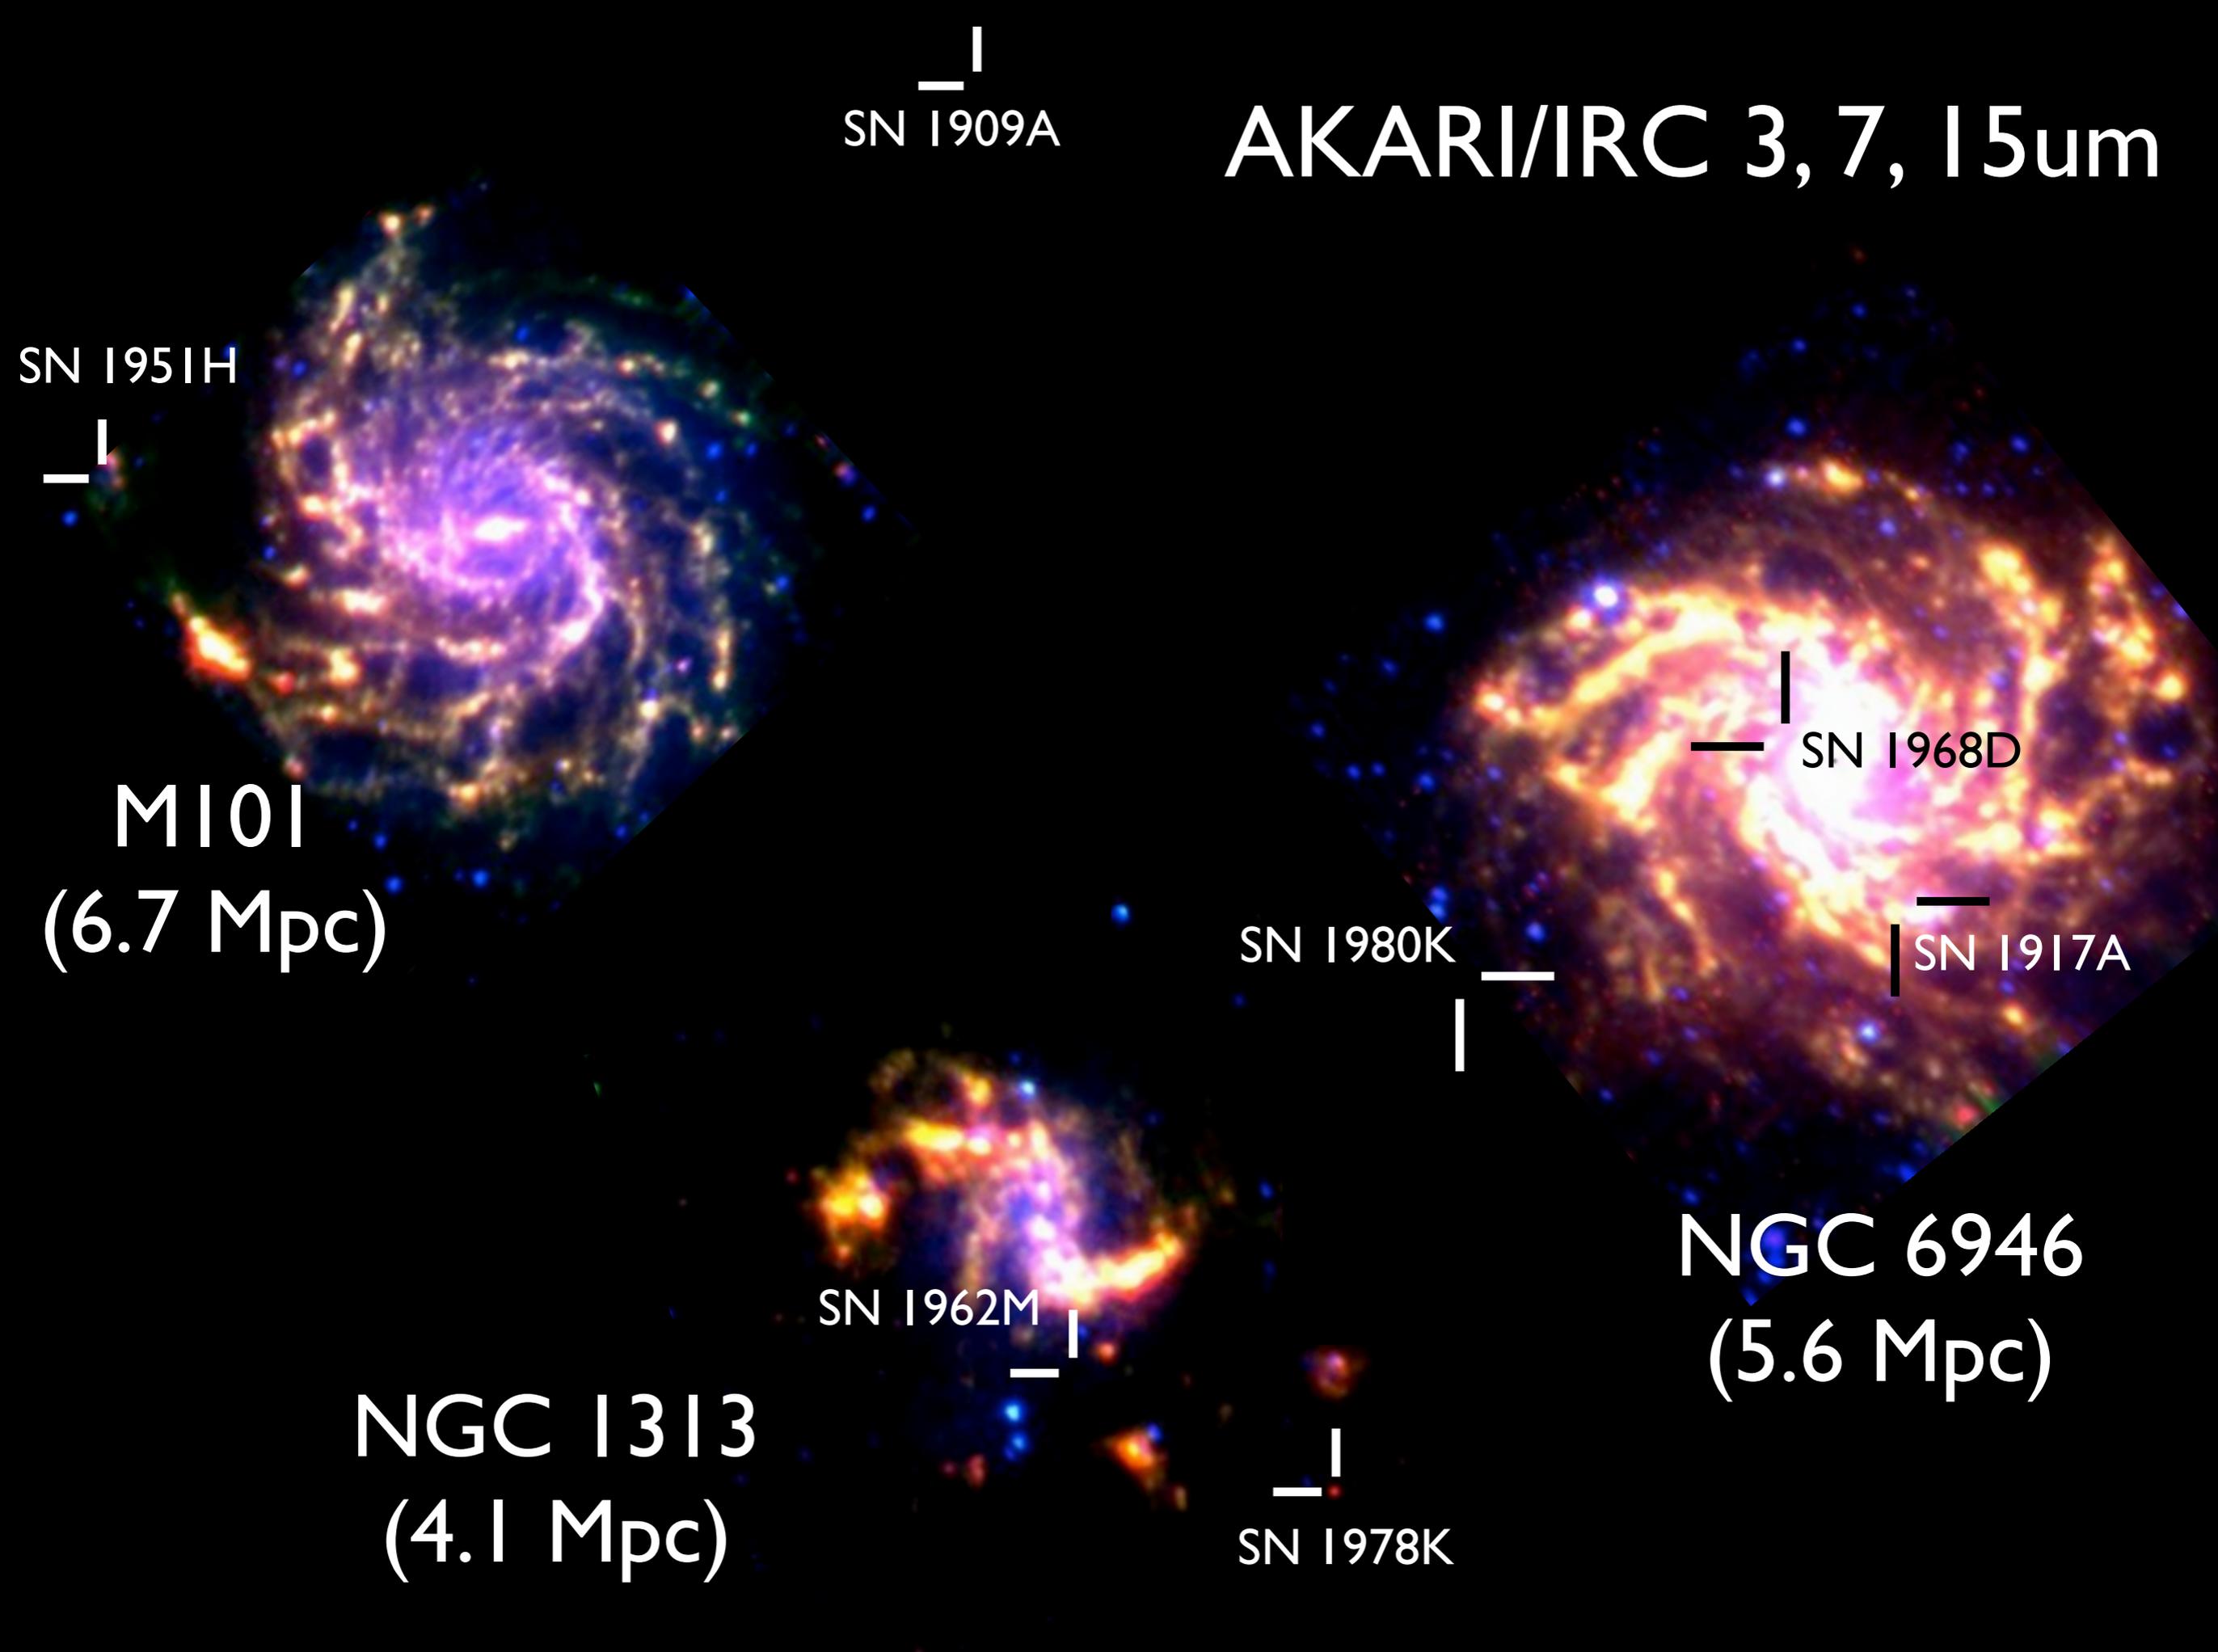

SN 1917A

NGC 6946
(5.6 Mpc)

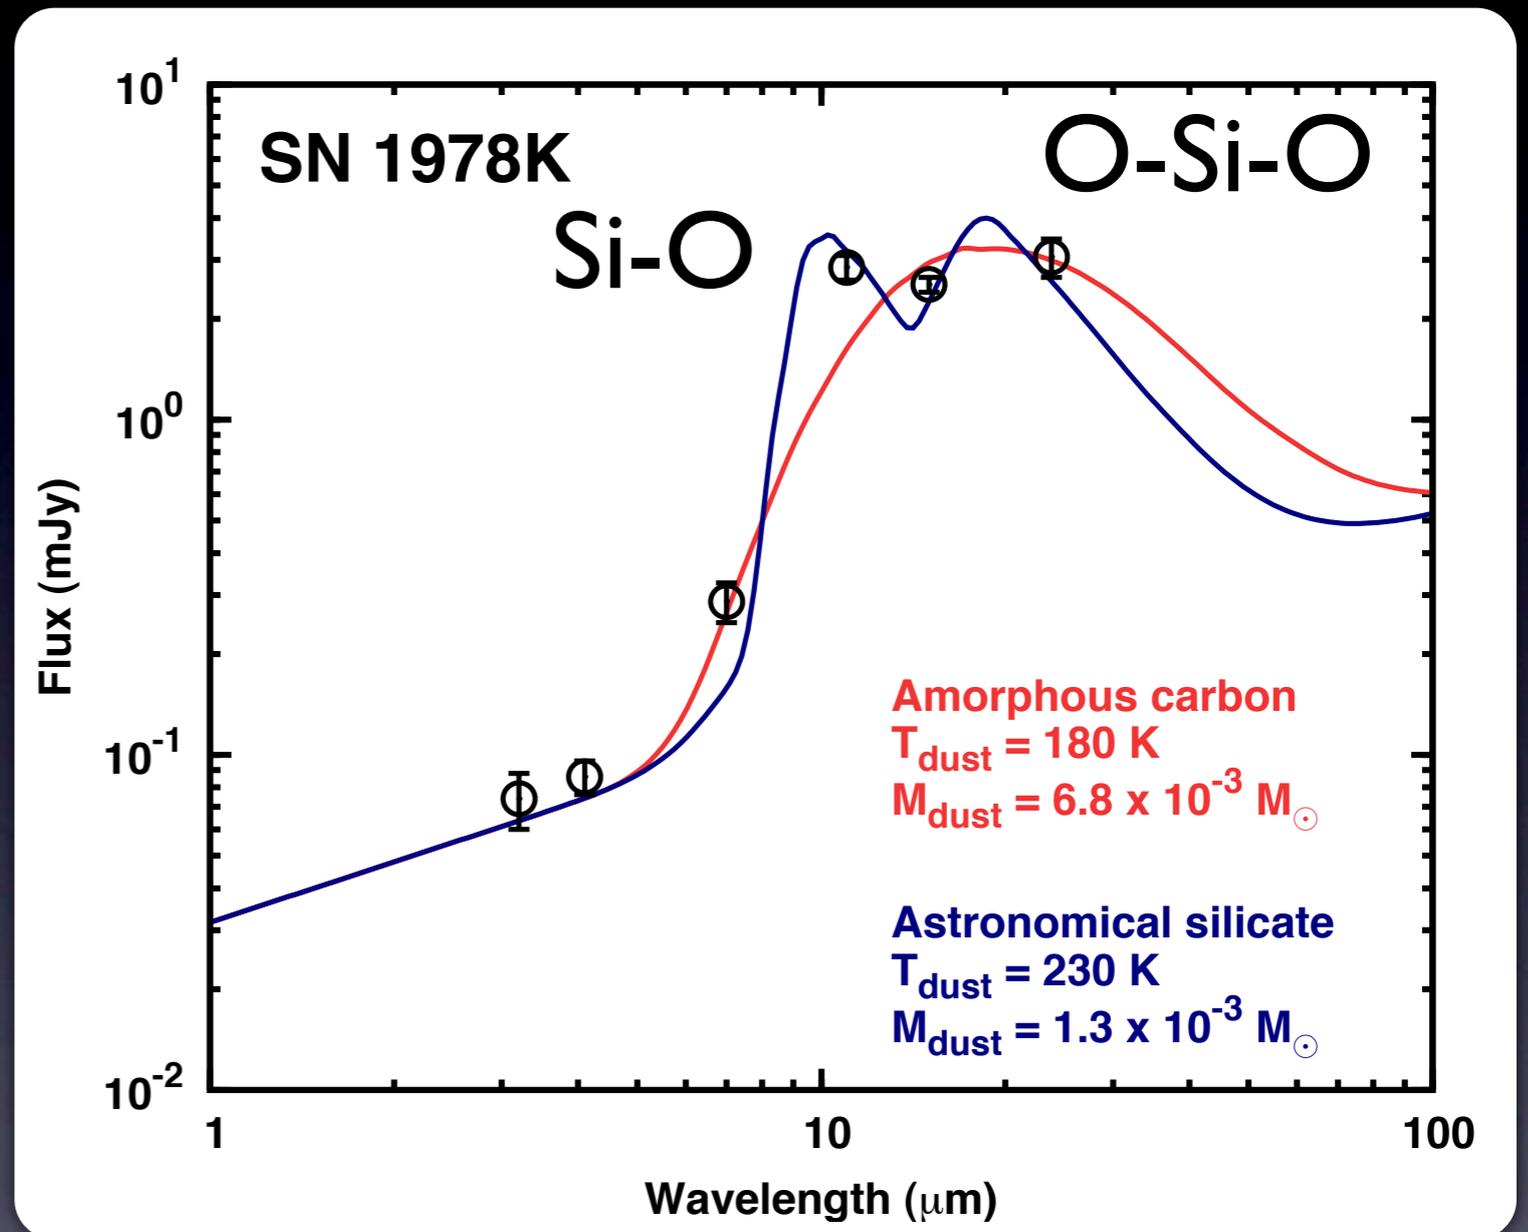

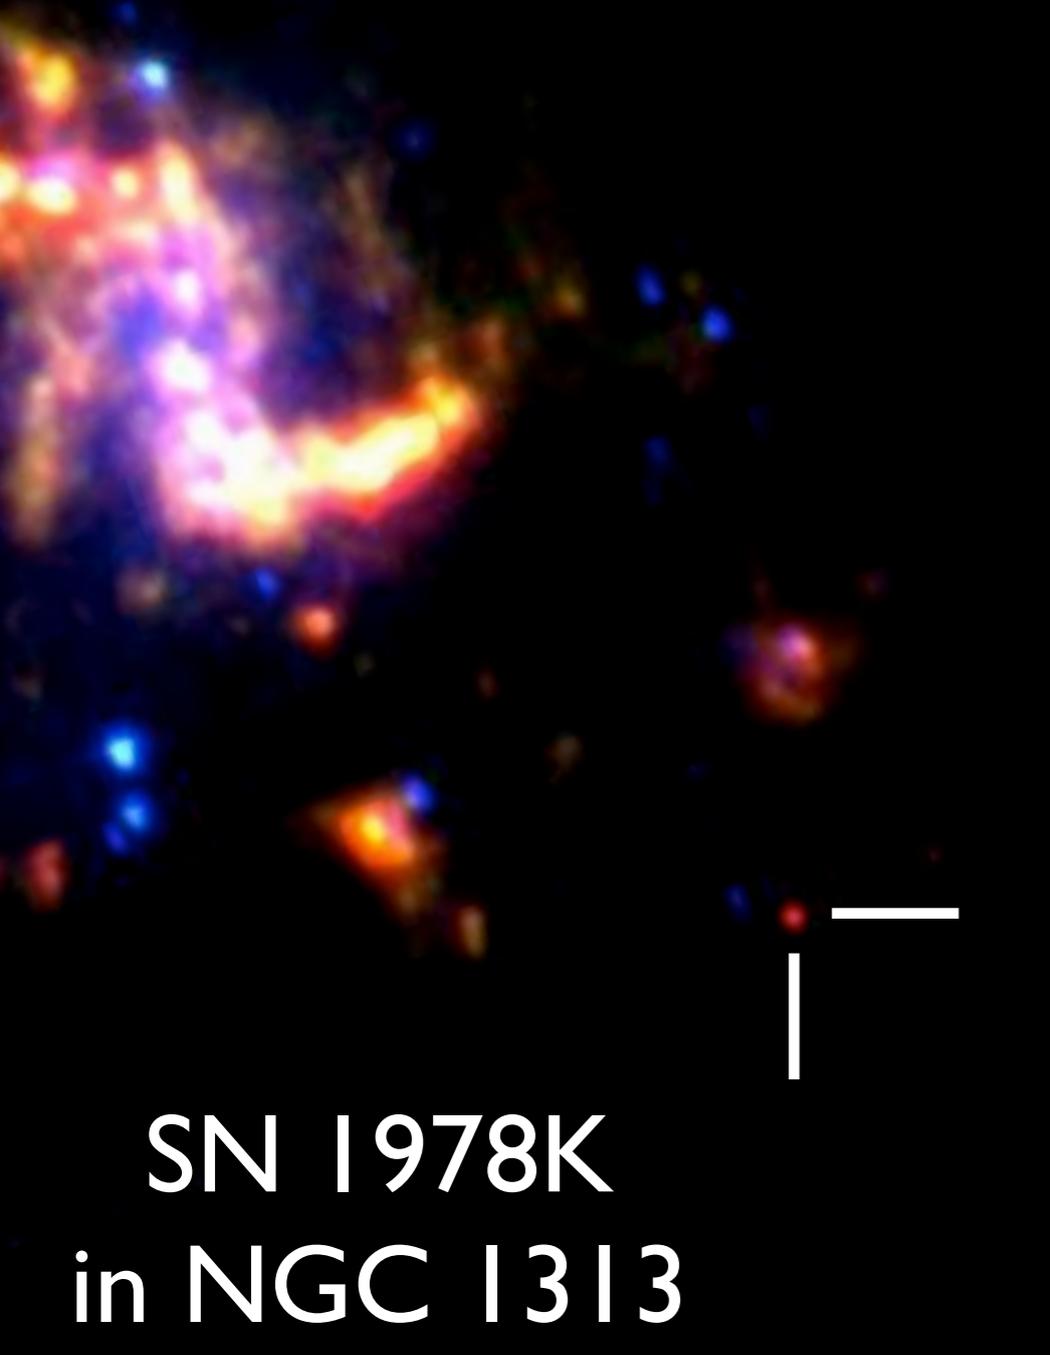

SN 1962M

NGC 1313
(4.1 Mpc)

SN 1978K

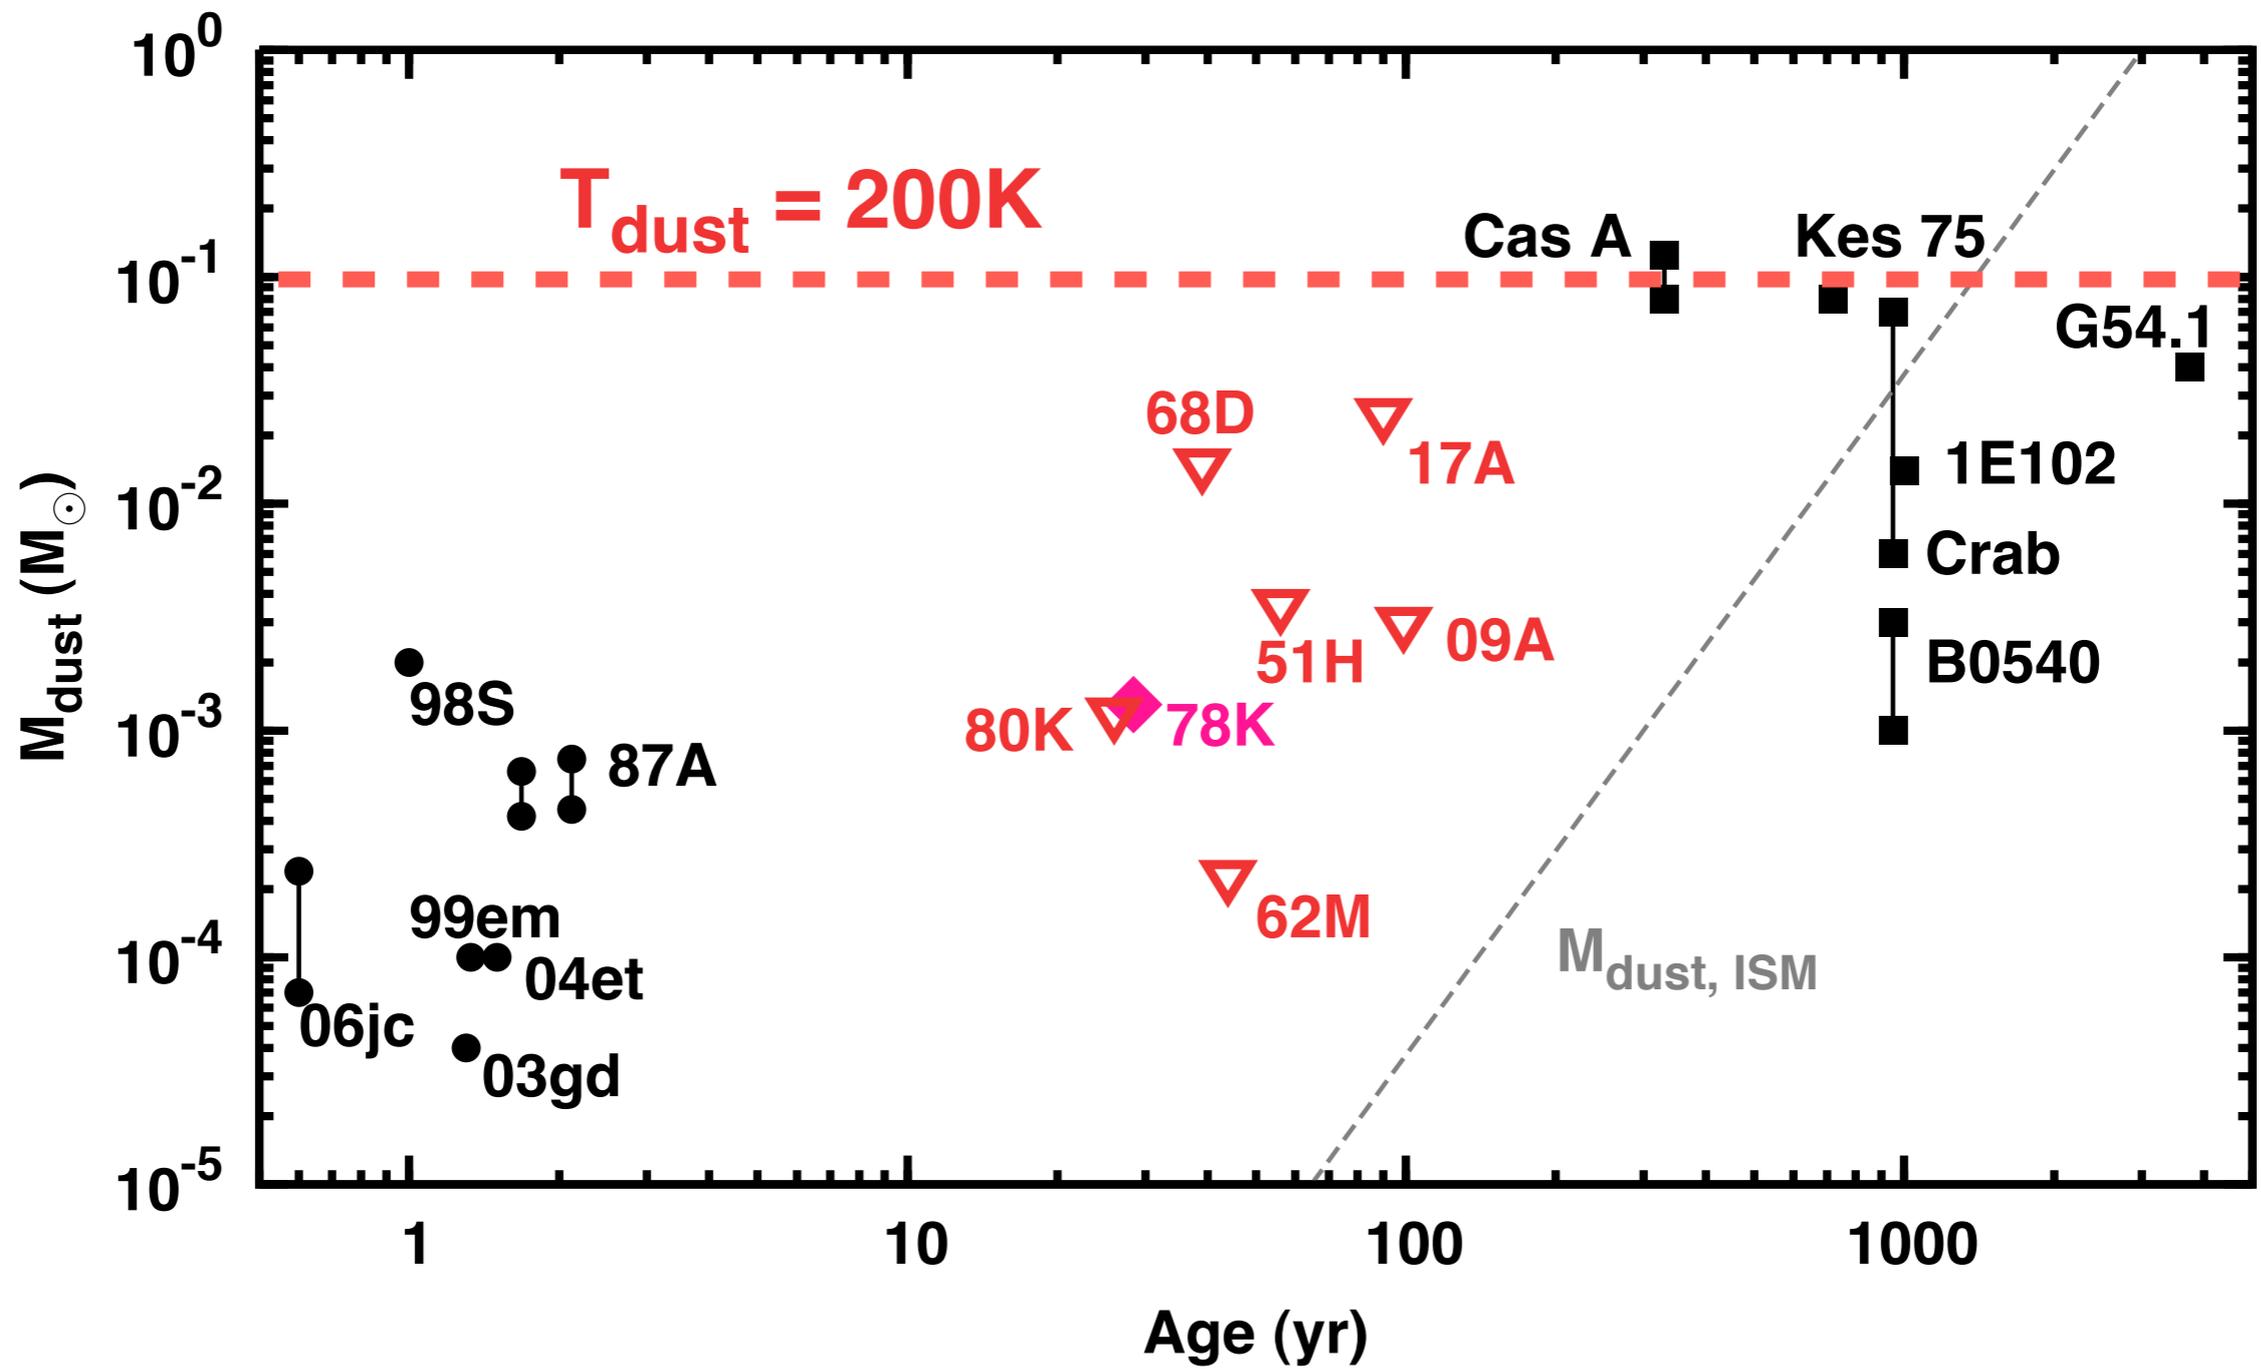

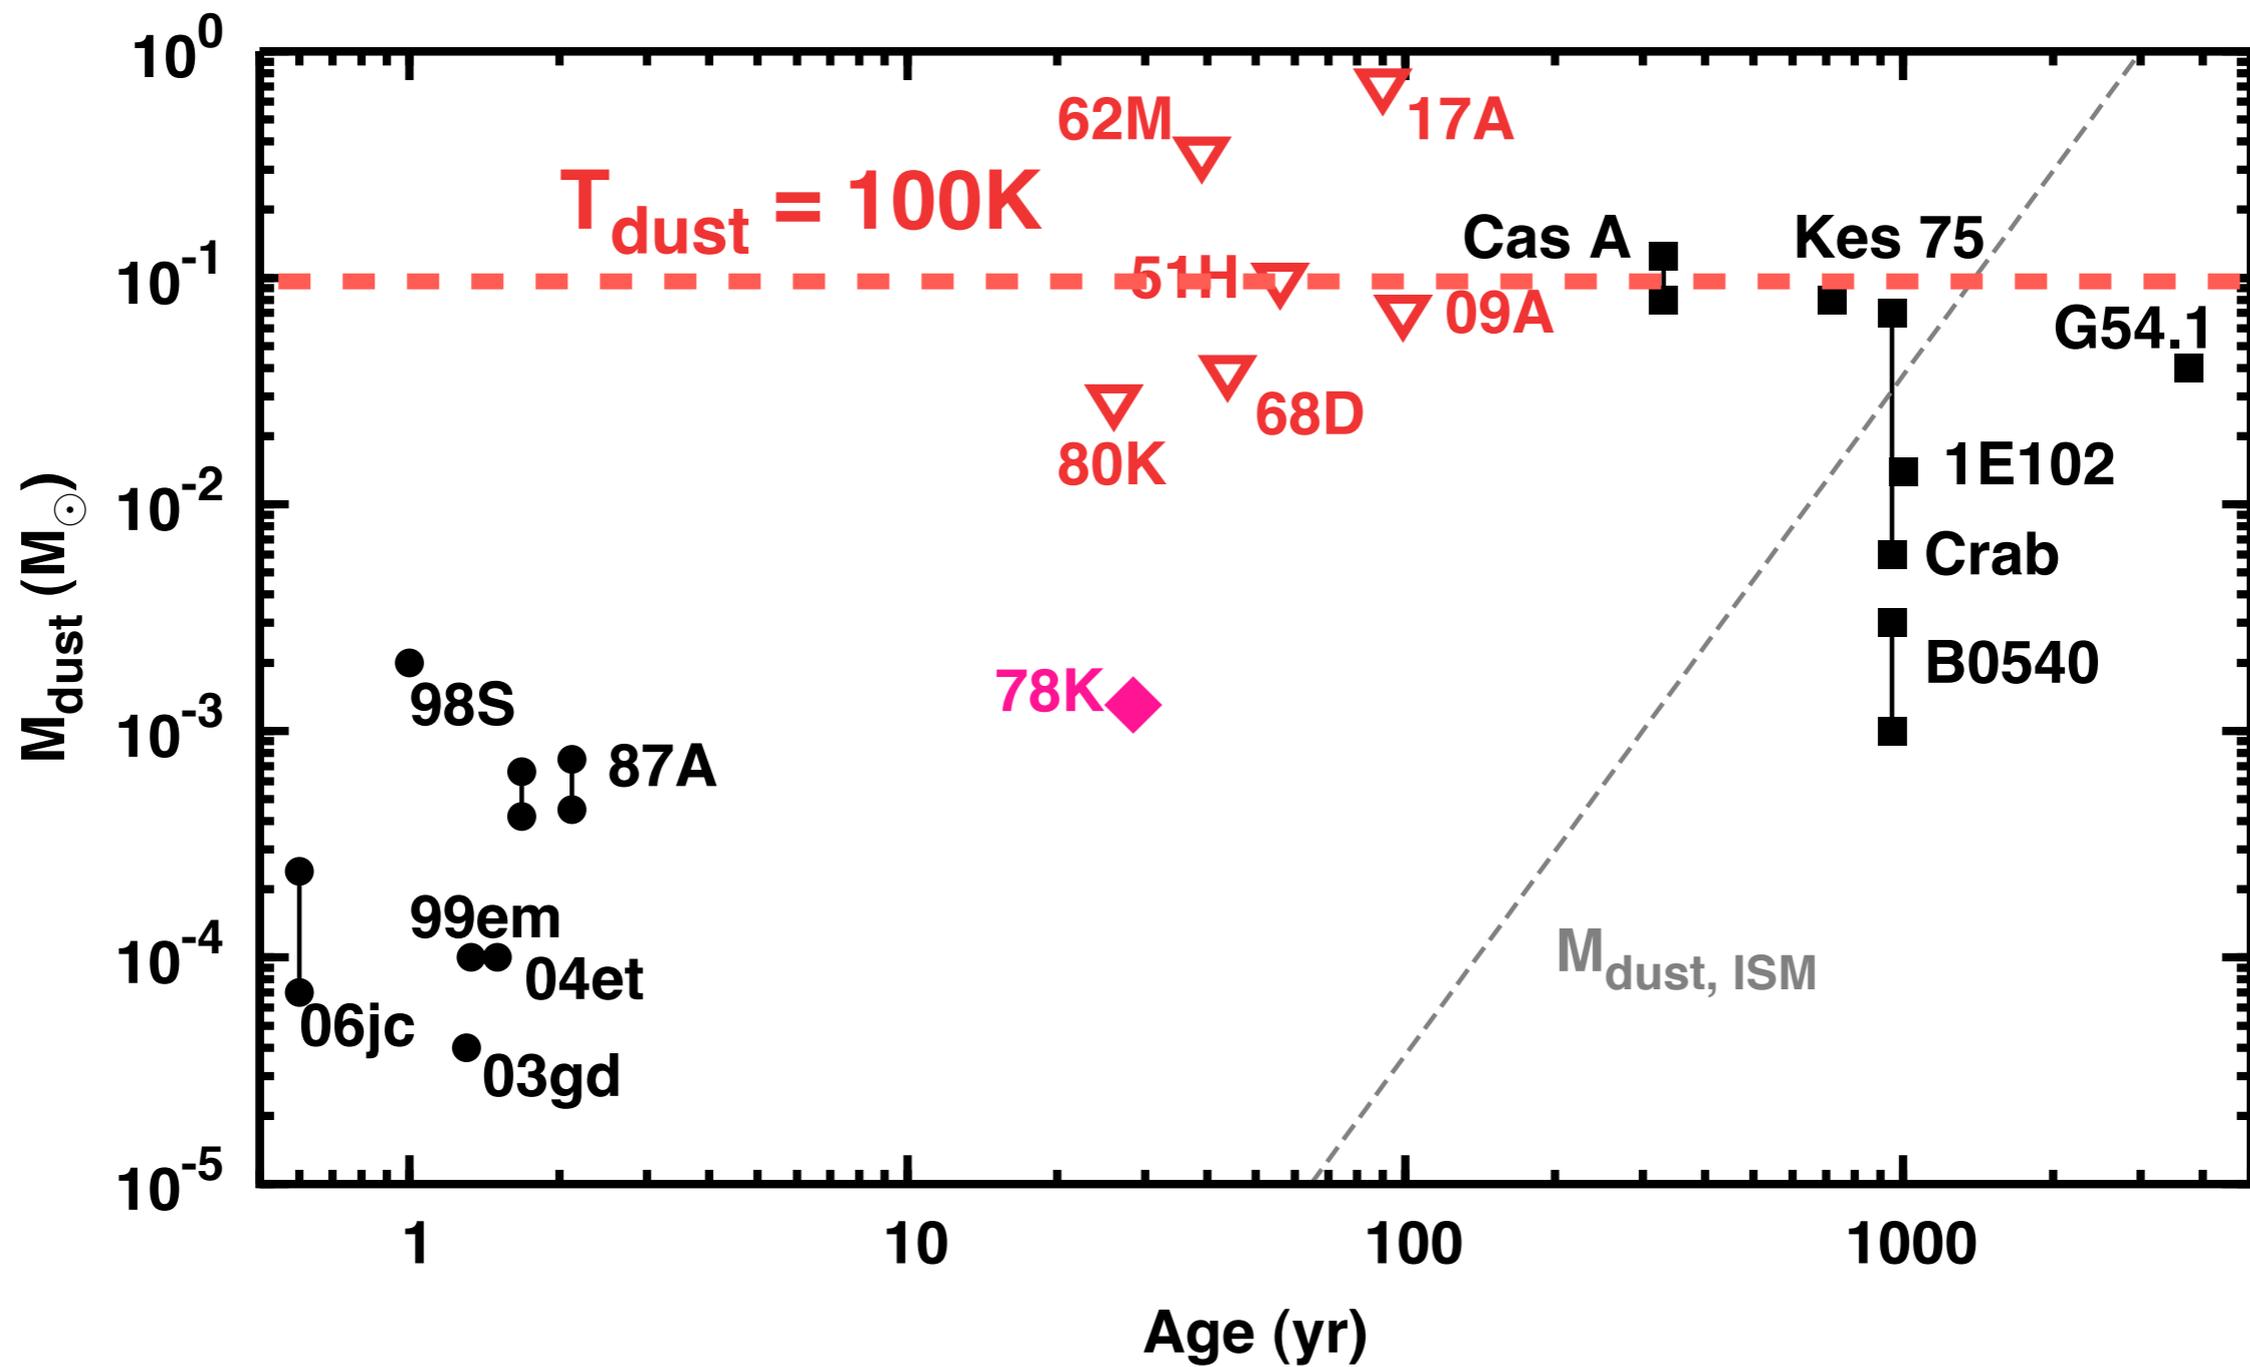

Detected!!

Silicate dust $M \sim 10^{-3} M_{\text{sun}}$ ($T \sim 200\text{K}$)

NOTE: Cooler dust can be hidden!

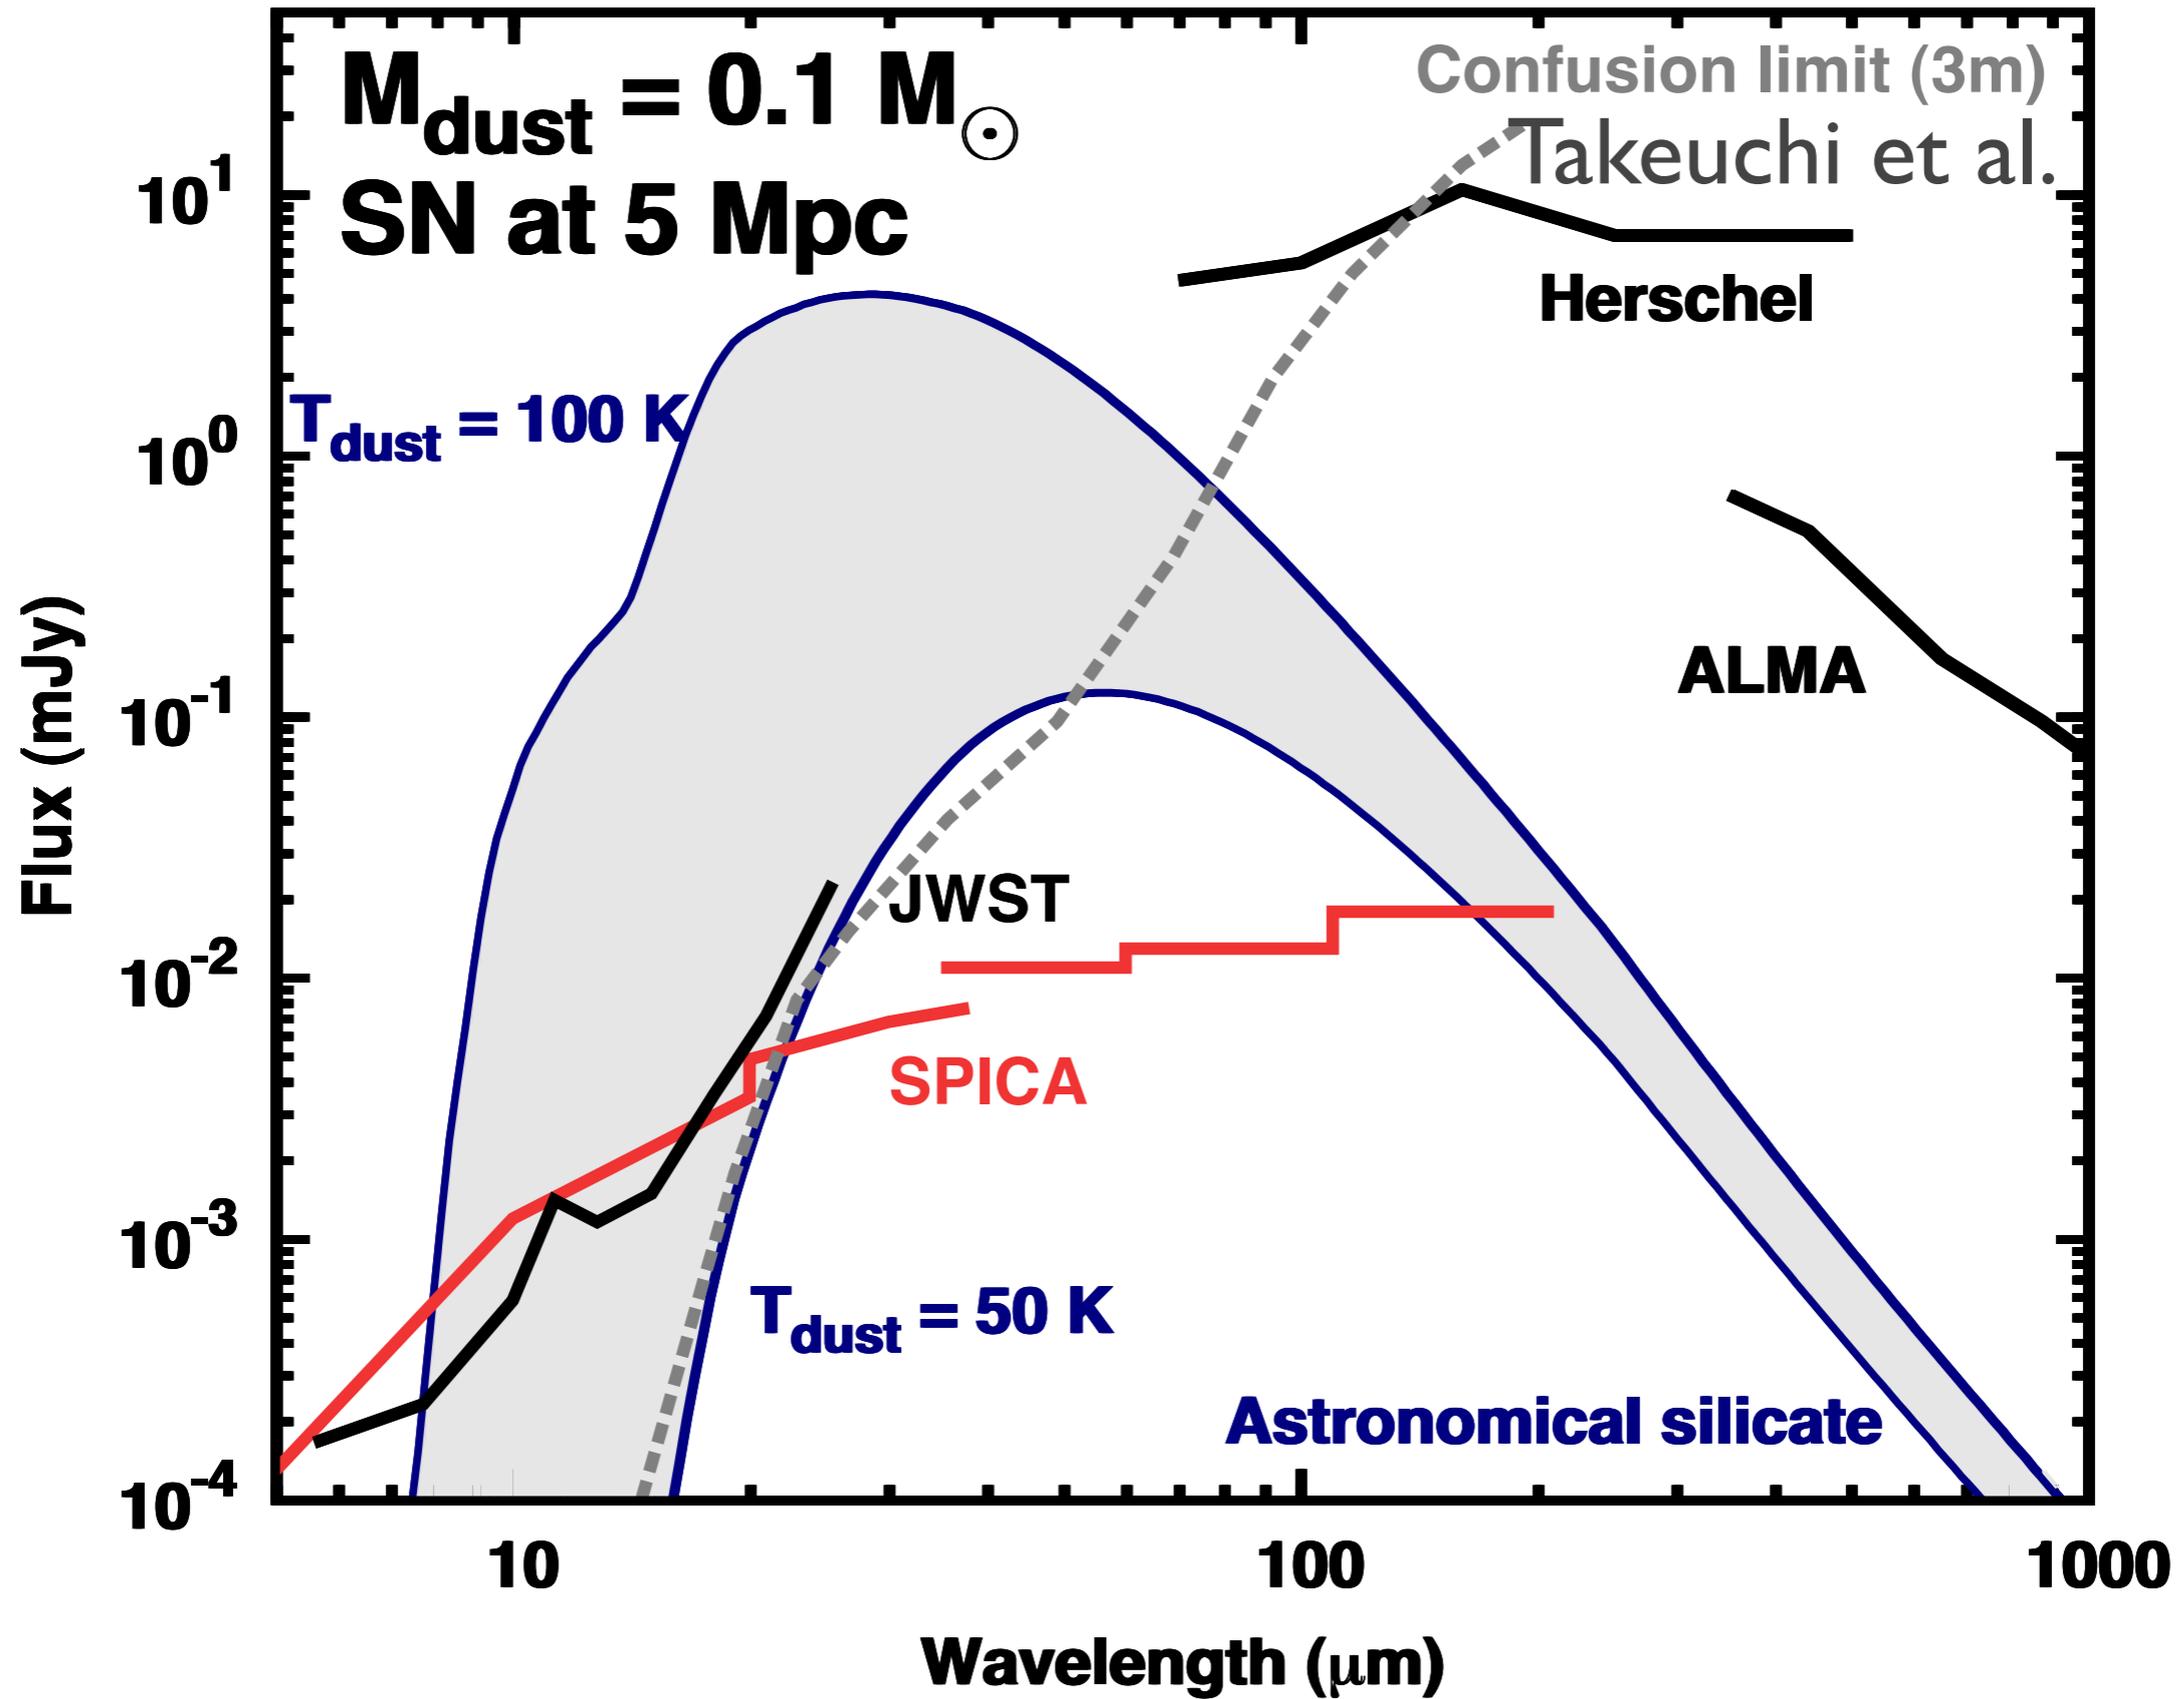

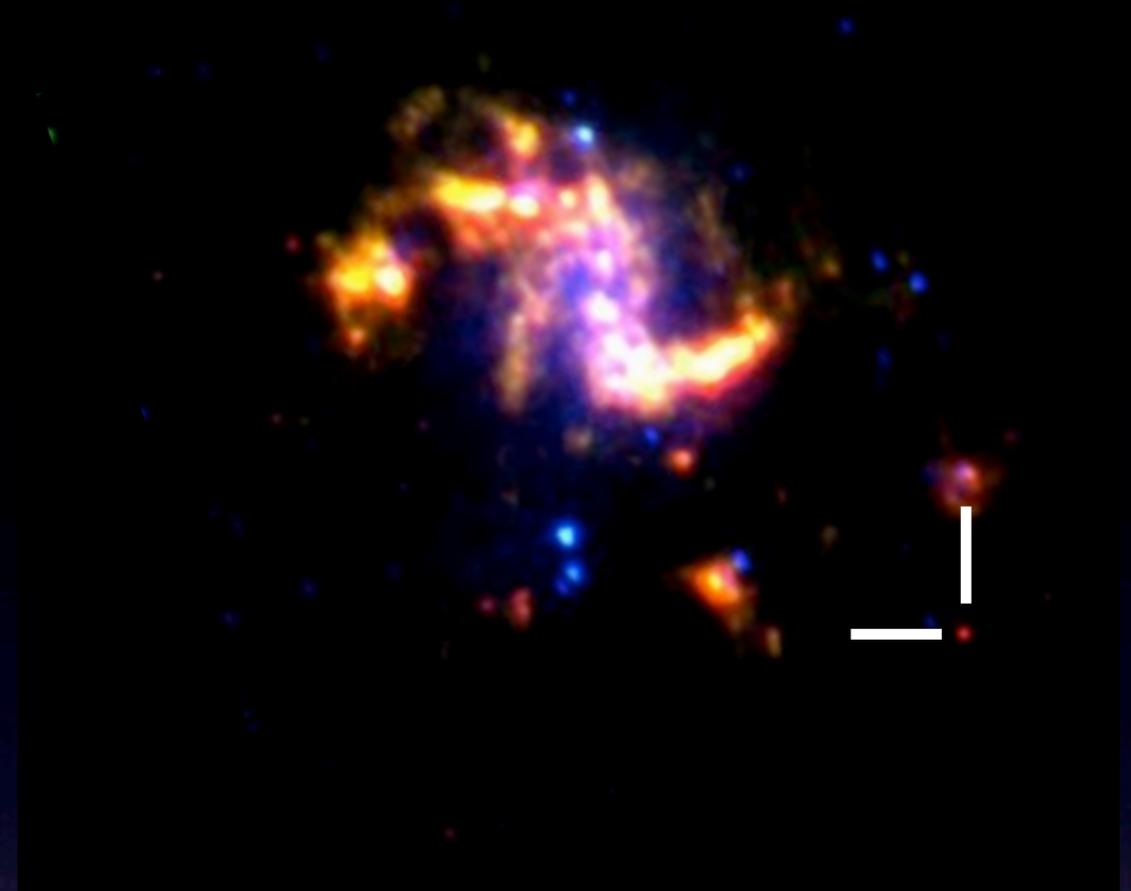

**0.1 Msun of Dust can be
Hidden**

Only If $T < 80-100$ K

5 σ detection limit (1 hr exposure)

SPICA will give the answer to the question whether SNe produce dust in the early Universe

- Imaging observations of nearby galaxies (incl. outskirts)
- Coverage from MIR to FIR is essential
- ~ 10 targets at $\sim < 5\text{Mpc}$
