The Mass-Metallicity Relation in Galaxies

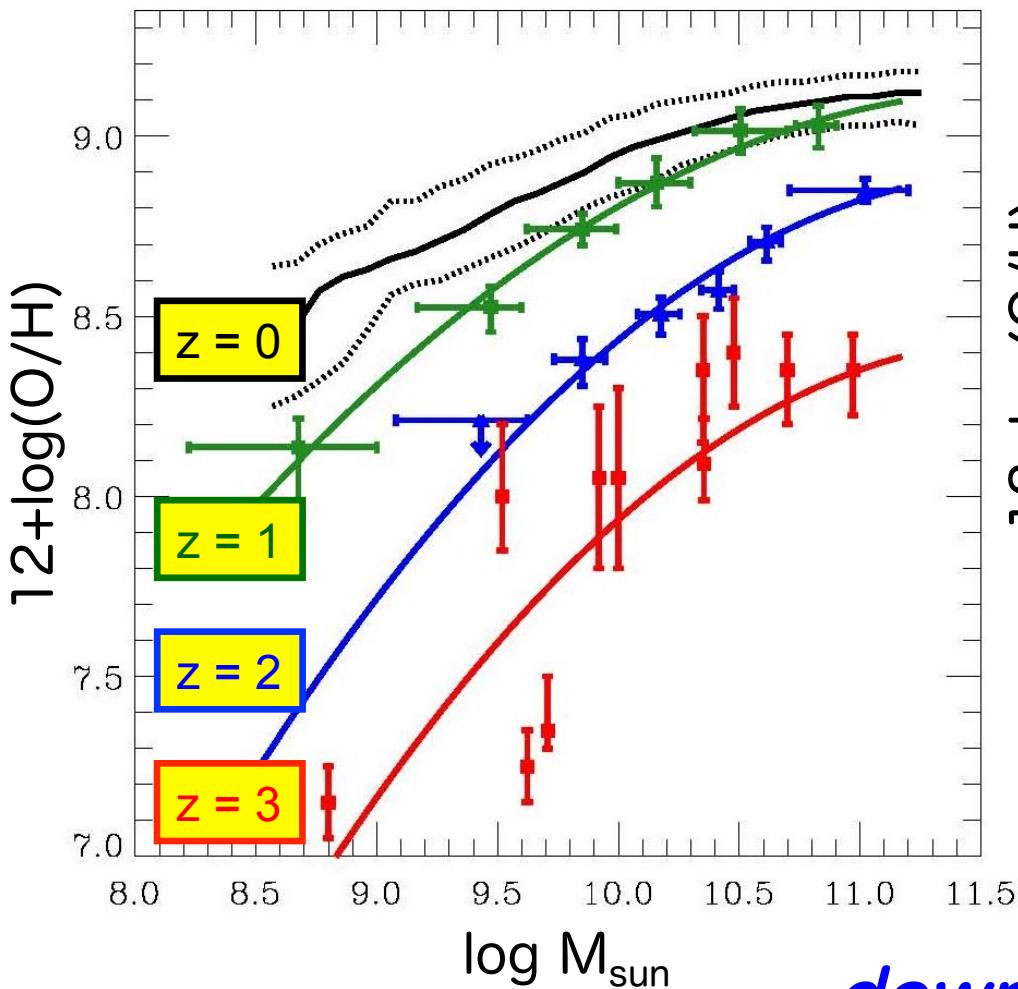

...suggesting the importance of galactic outflows (superwinds)

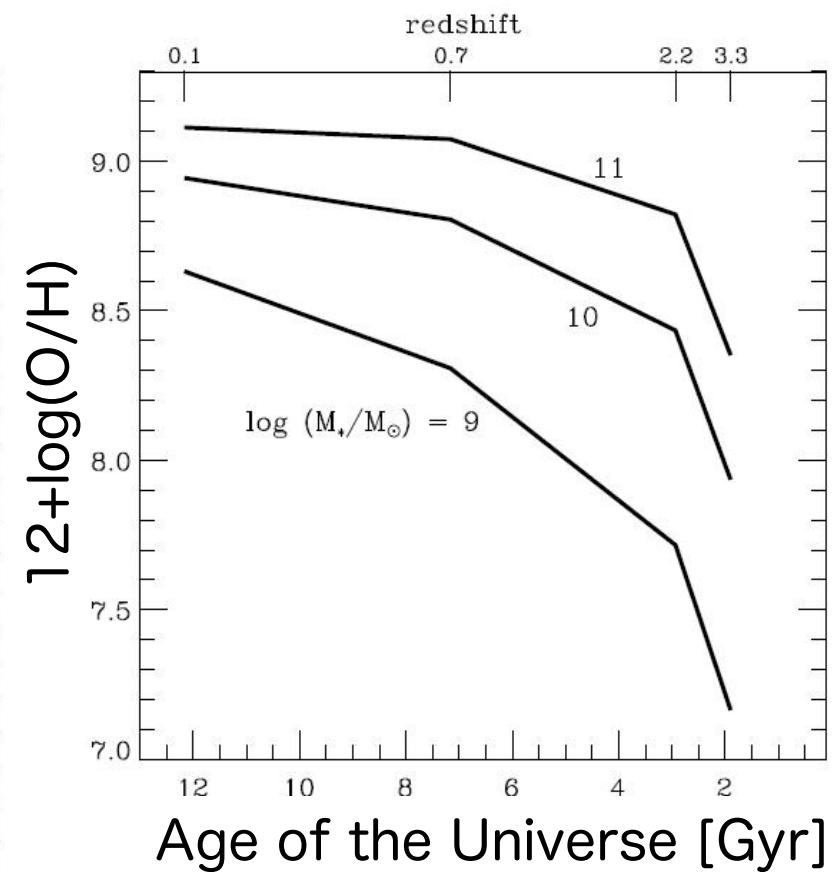

SDSS 53000 galaxies
at $z \sim 0.1$

Tremonti et al. (2004)

The Mass-Metallicity Relation: Redshift Evol.

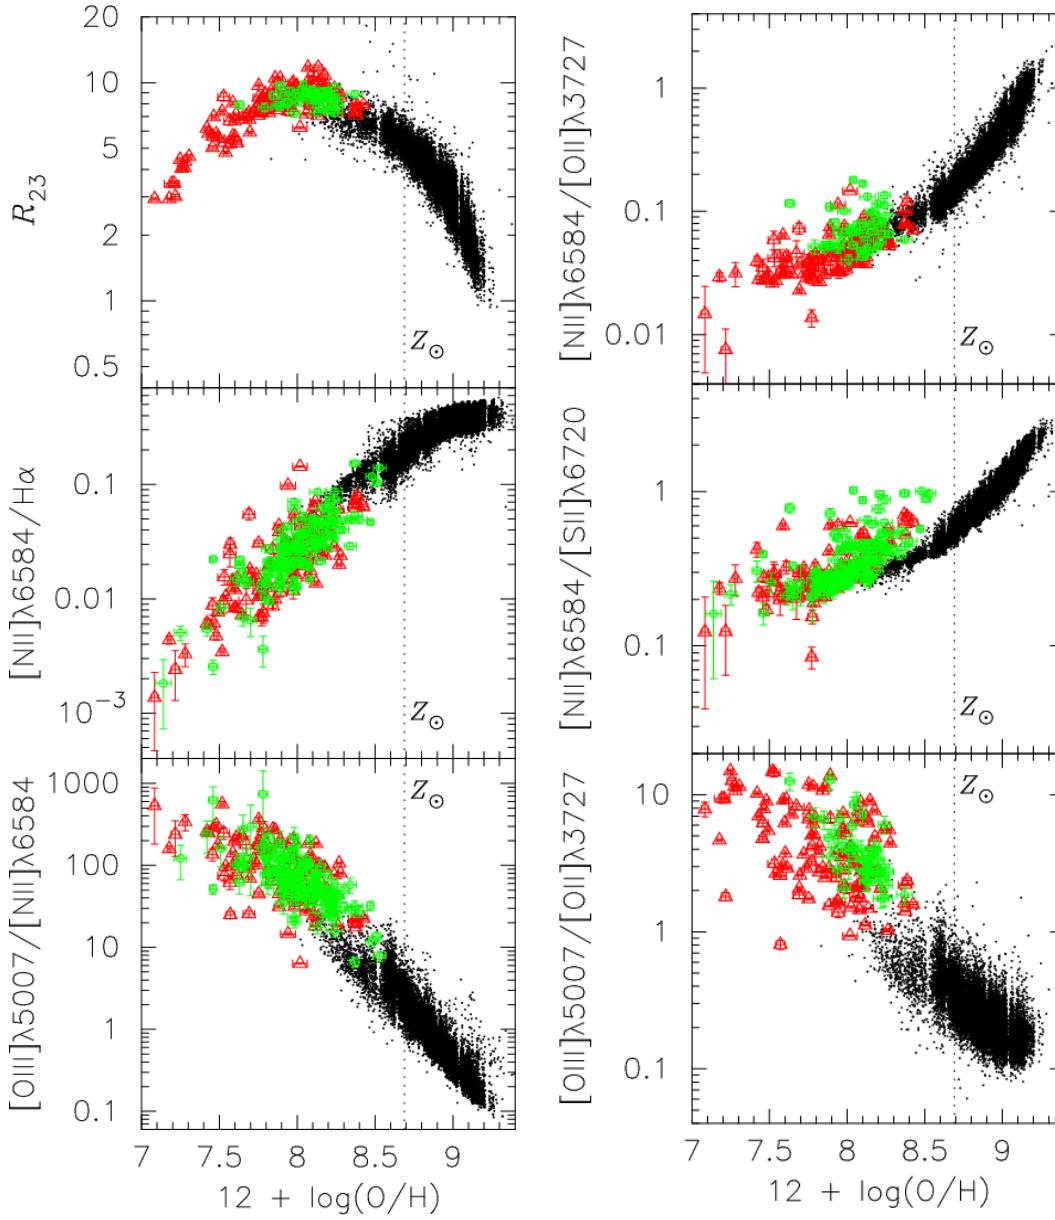

Maiolino, Nagao, et al. (2008)
with calibrations of Nagao+06

downsizing chemical evol.?

Metallicity Diagnostics

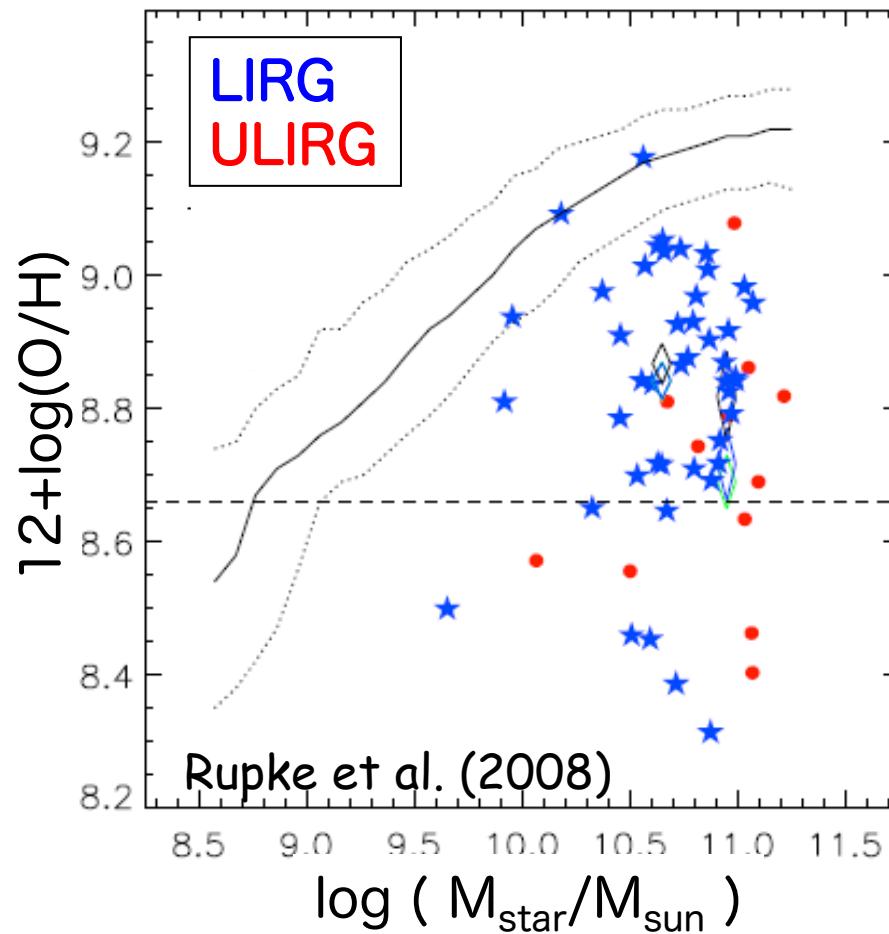

Using various **optical** emission lines such as:

[OII] 3727
[NIII] 3869
H beta 4861
[OIII] 5007
H alpha 6563
[NII] 6584
[SII] 6717,31

(and [OIII] 4363)

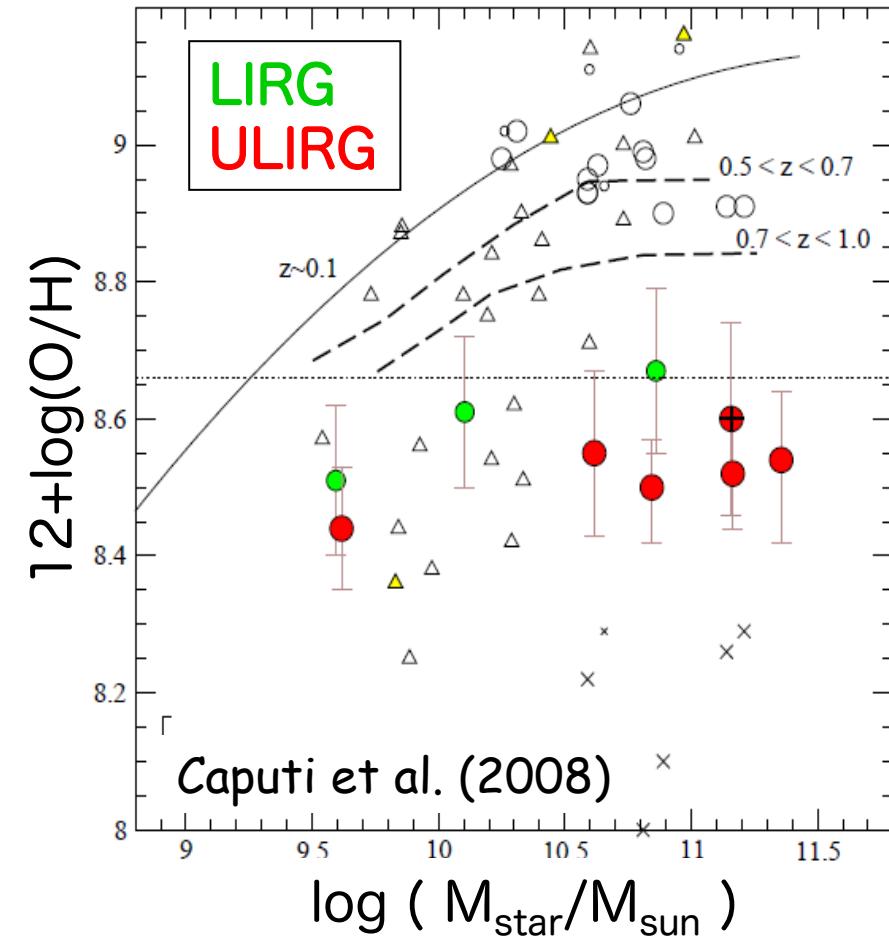

Nagao et al. (2006)

Metallicity in Dusty Galaxies

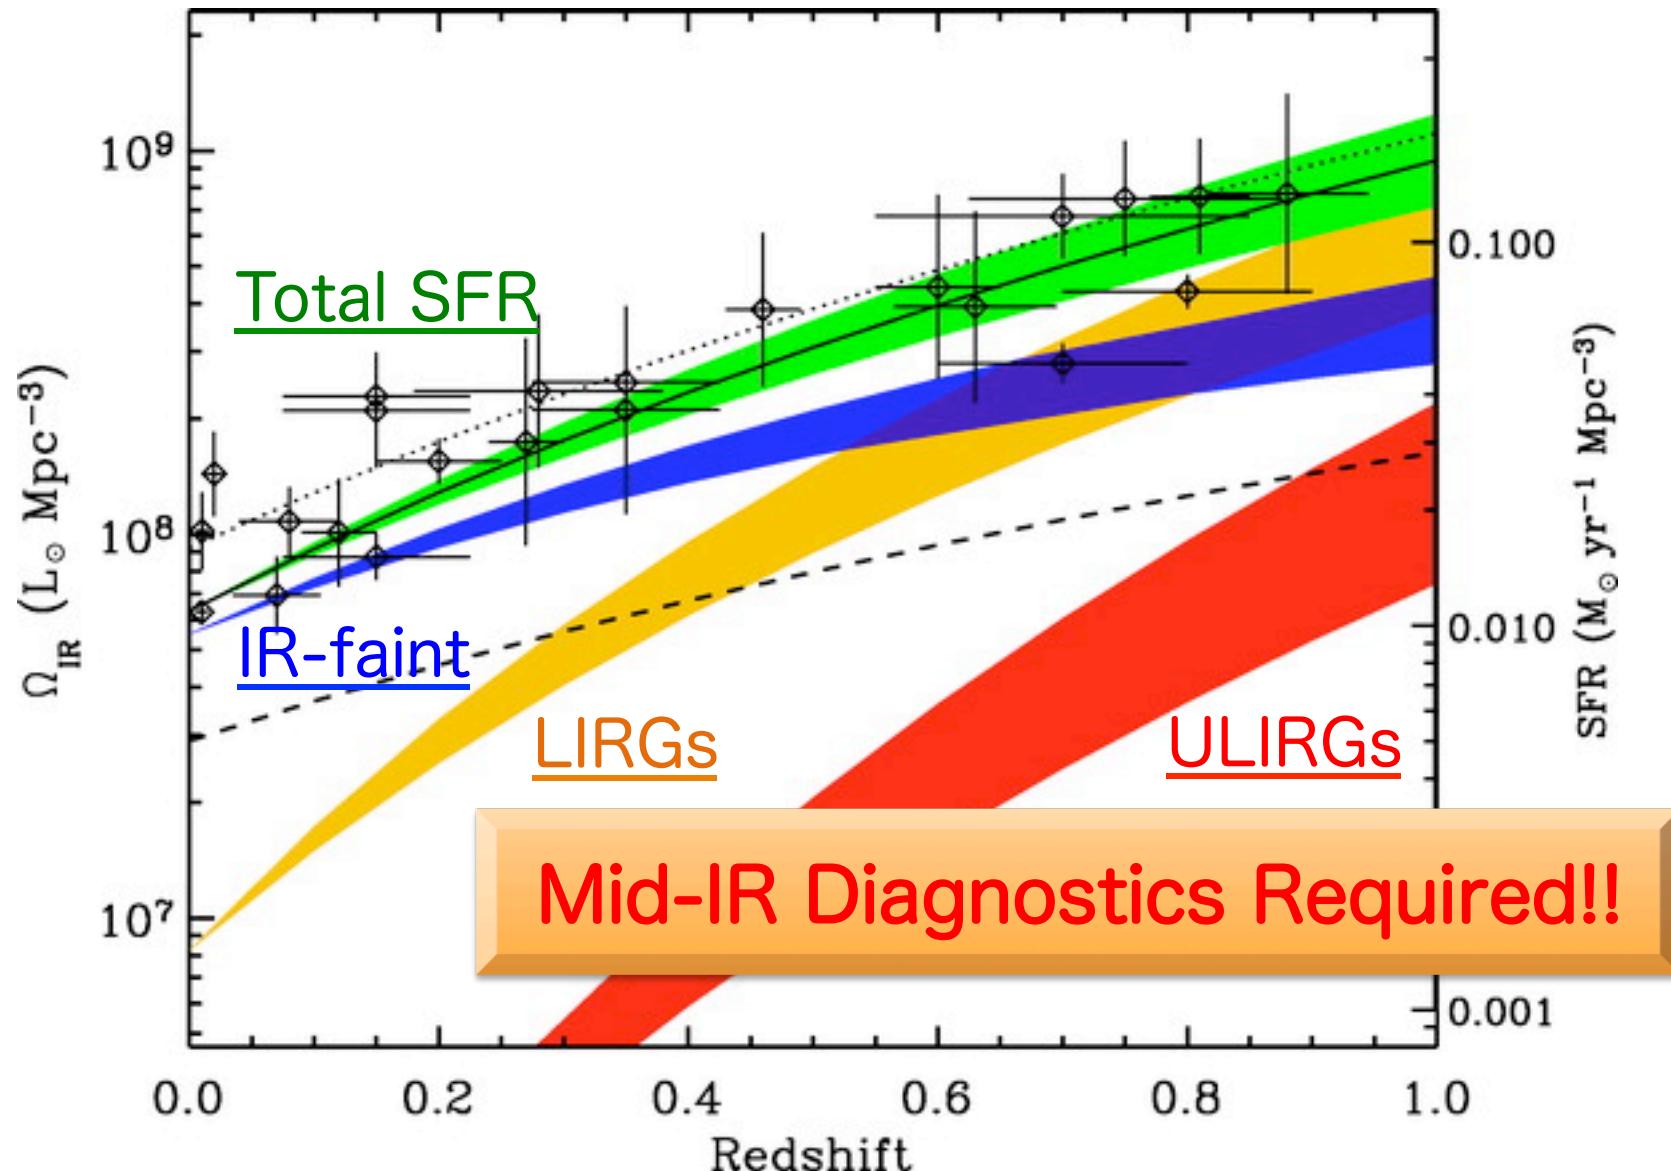

Are IR galaxies “chemically un-evolved” systems !?

...optical lines are from “un-obscured” parts

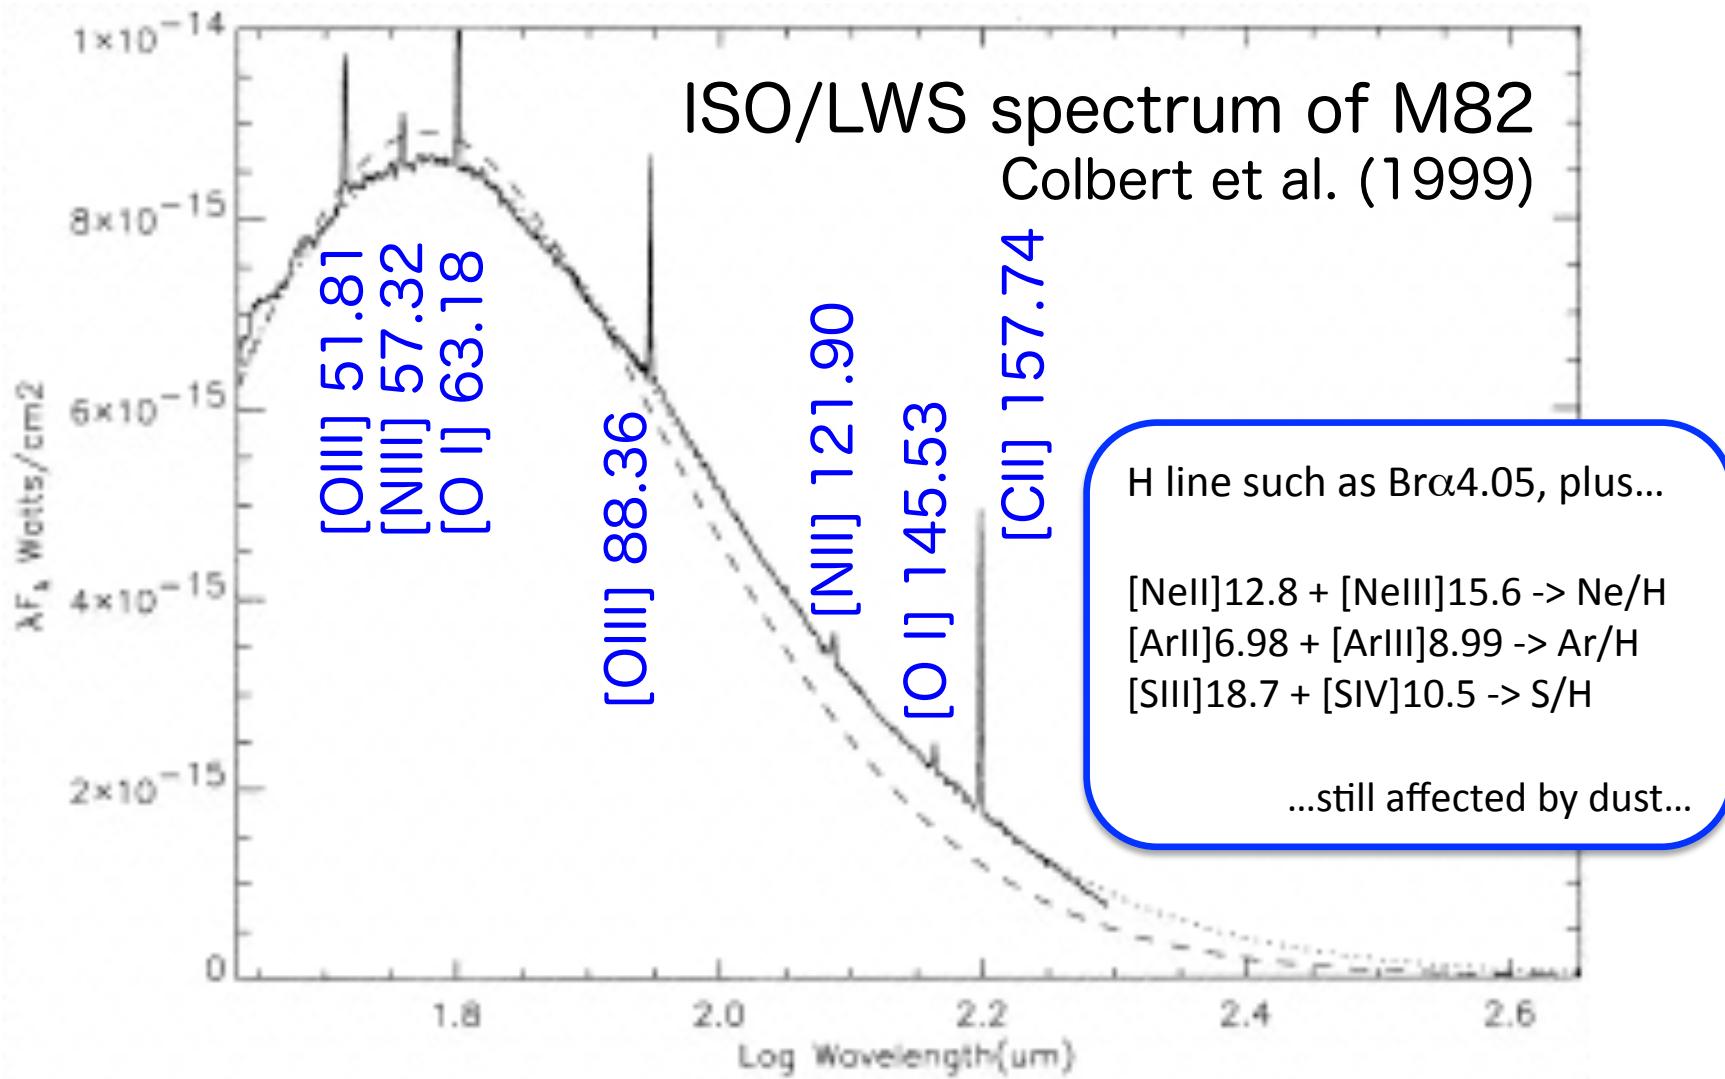

Importance of IR Galaxies

Le Floc'h et al. (2005)

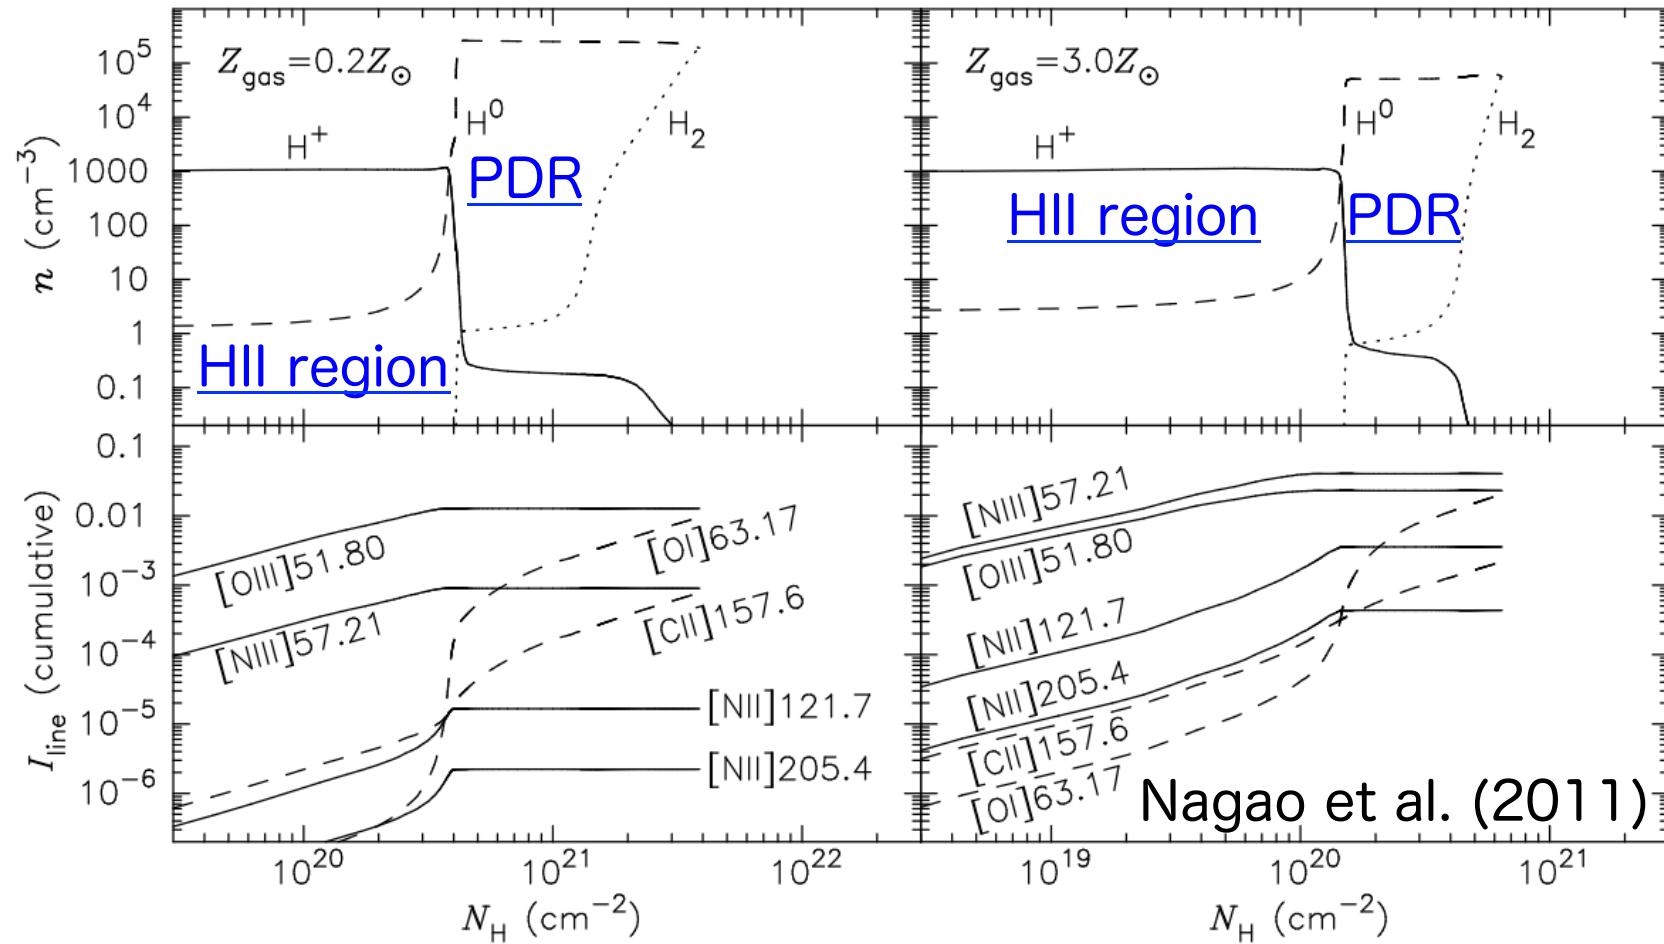

MidIR-FarIR Spectra of Galaxies

Various fine-structure lines: from WHERE??

Emissivity Distribution of Fine-Structure Lines

Cloudy simulations

ver.08.00

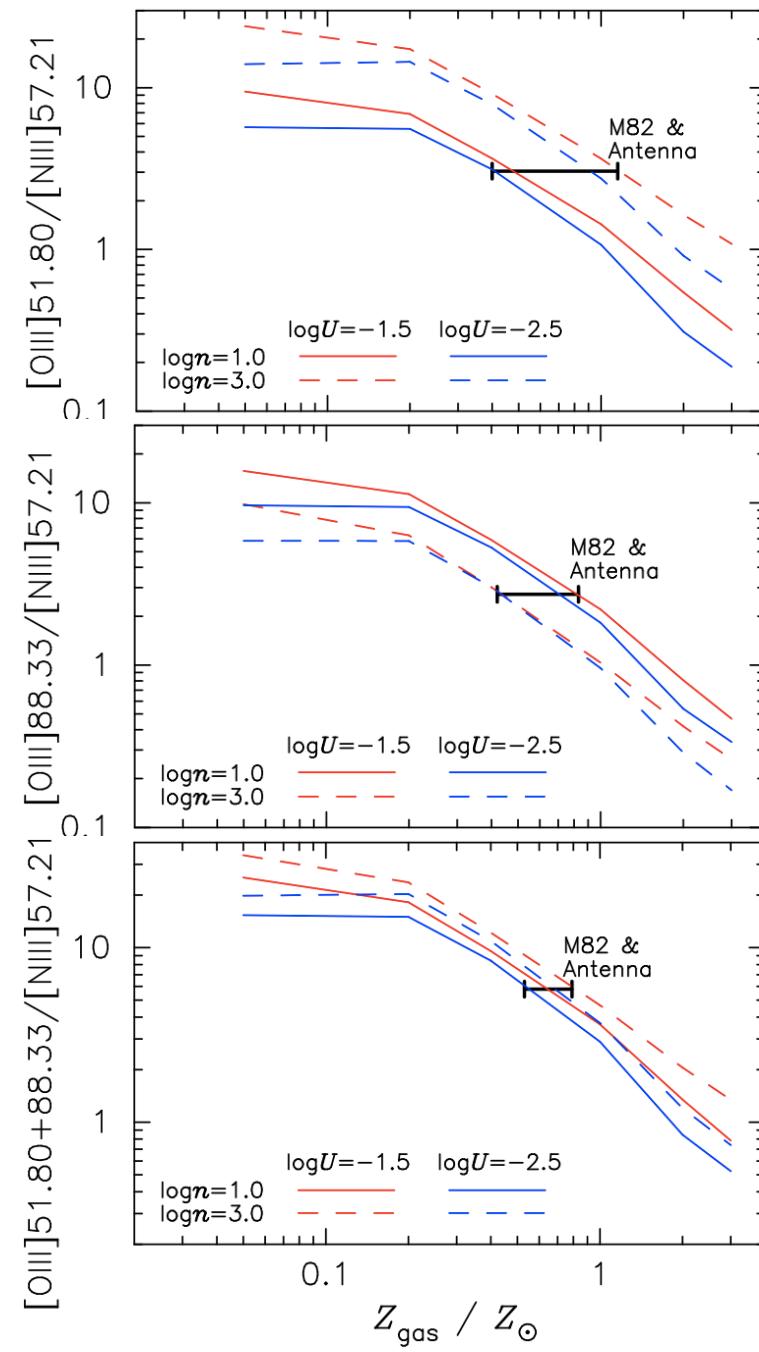

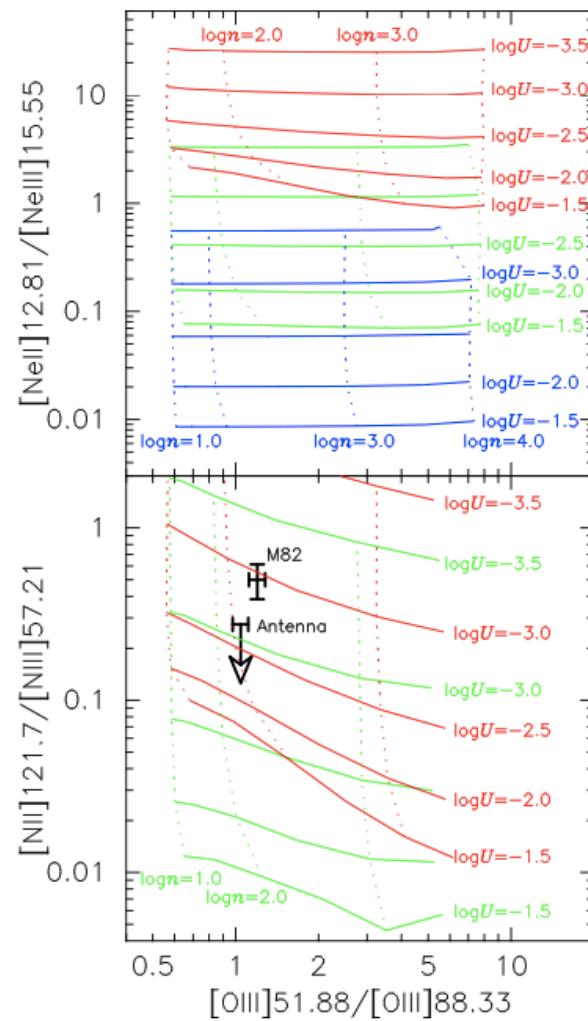

constant pressure

SED: starburst99 (const.SFR)

Focusing only on IR lines
from H II regions !!

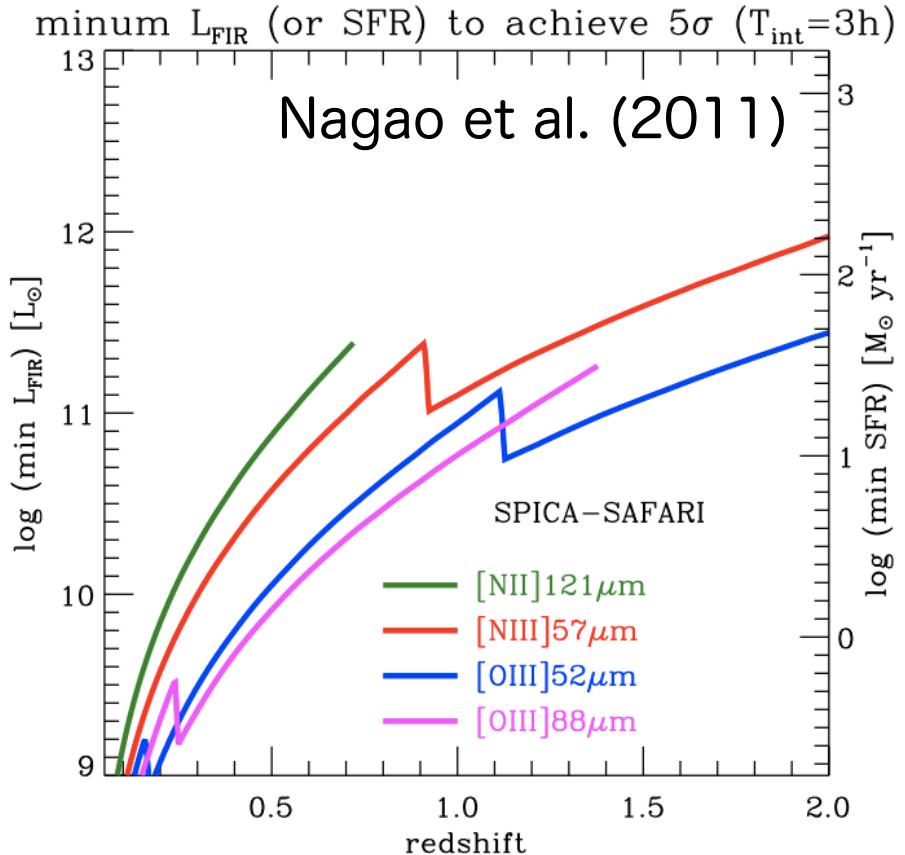

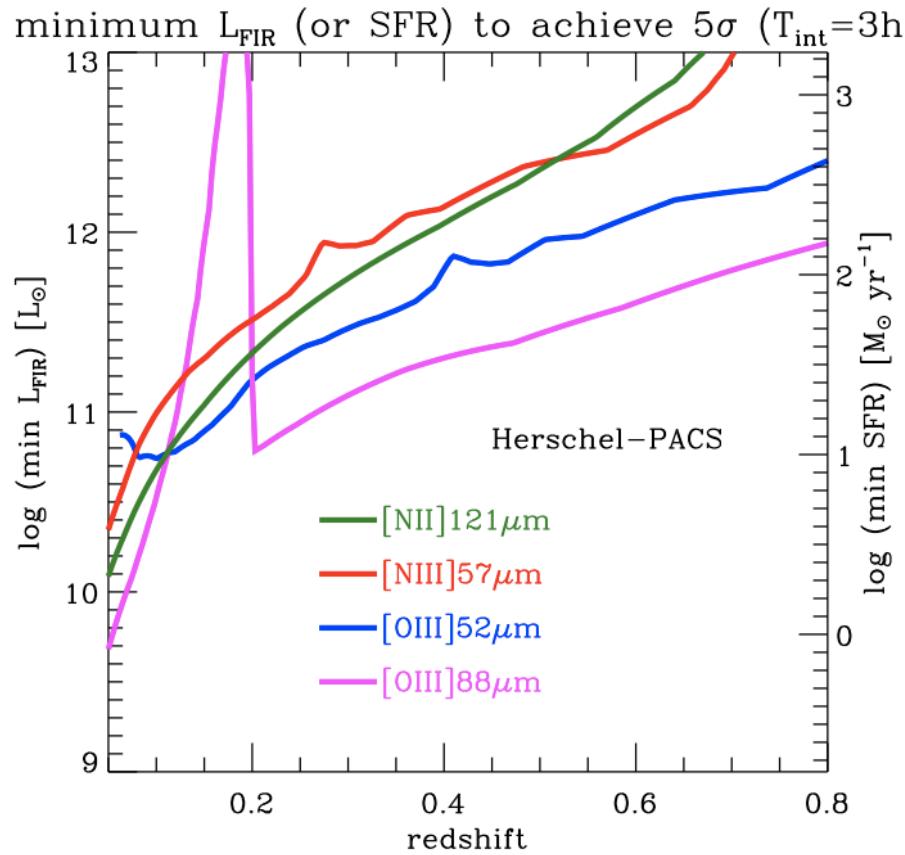

MidIR-FarIR Diagnostics

Use only strong lines from HII regions
...[OIII]51.80, [NIII]57.21, [OIII]88.33

Nagao et al.
(2011)

Observational Feasibility with SPICA

Herschel/PACS: **ULIRGs up to $z \sim 0.5$**
SPICA/SAFARI: **LIRGs up to $z \sim 1.5$**
SPICA/BLISS: **LIRGs up to $z \sim 4$**

Summary

MIR-FIR diagnostics needed for “evolving” galaxies:
are dusty galaxies really “chemically young” !?

Key features: [OIII]51.80, [NIII]57.21, [OIII]88.33
for density and metallicity measurements

LIRGs up to $z \sim 1.5$ can be studied with SAFARI

Requirement: wavelength coverage up to $\sim 210\text{um}$
& wavelength resolution $R \sim 2000$ ($\Delta v \sim 150\text{km/s}$)

Synergy with ALMA: [NII]205, PDR lines, CO, ...

See Nagao+ (arXiv:1012.2471) for more details!
